Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

²Figures relate to value of production rather than value of shipments.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E10--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above.

¹Figures relate to value of production rather than value of shipments.

²Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balance of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. ! General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments, and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments or production (million dollars) | Capital expenditures, new (million dollars) |

(D) Withheld to avoid disclosing figures for individual companies.

¹Figures relate to value of production rather than value of shipments.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments or production | | | | | Value of primary product shipments or production | | | |

- Represents zero.

¹Figures relate to value of production rather than value of shipments.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 5A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | Other industries | Product code | Industry, class of products, and miscellaneous receipts | Other industries |
|--------------|---|------------------|--------------|--|------------------|
| | Listing of the other industries with over \$2 million shipments of the primary products | | | Listing of the other industries with over 2 million shipments of the primary products--Continued | |

| 20990 00 | Miscellaneous food, n.s.k., for companies with 10 employees or more. (See note.)..... | | (X) | 223.0 | (X) | 199.7 |
| 20990 02 | Miscellaneous food, n.s.k., for companies with less than 10 employees. (See note.)..... | | (X) | 124.7 | (X) | 35.1 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

(X) Not applicable. (NA) Not available. ^eMore than 30 percent of the data for this item was estimated. ^rRevised.

¹Includes approximately \$300 million of canned fishery products produced in Puerto Rico and American Samoa. For further information, see "Canned Fishery Products, 1972," published by the National Marine Fisheries Service, National Oceanic and Atmospheric Administration.

²Quantity estimated based on the quantity-value relationship for other products in the product class or industry.

³Included with code 20920 00.

⁴Product lines are combined to avoid disclosing figures for individual companies.

⁵Data for codes 20999 11 and 20999 91 are included with code 20999 00, Other food preparations, n.e.c., n.s.k., to avoid disclosing figures for individual companies.

⁶Includes data for small establishments that were not mailed report forms. The industry classification for these establishments were assigned on the basis of brief descriptions of the general activity of the establishments. Where the description is incomplete or there are relatively fine lines of demarcation among industries or between manufacturing or nonmanufacturing activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product or activity information. Based on a review of reports of respondents reporting in this and other food industries, the above-mentioned limitations of these data are believed to be more significant in industry 2099 than in other food industries.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments or production (million dollars) | | Product class and geographic area | Value of shipments or production (million dollars) | |

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments or production (million dollars) | | Product class and geographic area | Value of shipments or production (million dollars) | |
|---|--|-------|---|--|------------------|
| | 1972 | 1967 | | 1972 | 1967 |
| OTHER FOOD PREPARATIONS, N.E.C. (SIC 20999)--Con. | | | OTHER FOOD PREPARATIONS, N.E.C. (SIC 20999)--Con. | | |

| Florida..... | 24.4 | 6.7 | Washington..... | 10.8 | 5.9 |
| East South Central Division..... | 62.3 | 41.3 | Oregon..... | 3.8 | CC |
| Kentucky..... | 32.7 | EE | California..... | 259.1 | 155.2 |
| Tennessee..... | 14.4 | 8.7 | Hawaii..... | 2.1 | (¹) |
| Alabama..... | EE | 11.4 | | | |
| Mississippi..... | AA | AA | | | |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

(NA) Not available.

¹This State or division was not shown as a separate line in table 6B in the 1967 report for this industry. A footnote to the 1967 table 6B showed those States with \$1 million or more reported shipments.

²For 1967, product class 20995, Tea in Consumer Packages, is included in product class 20999, Other Food Preparations, N.E.C. A separate geographic breakdown for new product class 20995 is not available for 1967. For comparability between 1972 and 1967 for these products, see tables 6A and 6C of this publication.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes.

(X) Not applicable. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²Figures relate to value of production rather than value of shipments.

TABLE 7A. Materials Consumed, by Kind: 1972 and 1967

Note: In 1967, data for manufactured mixed gas, blast furnace gas, and coke oven gas were included in code 131300, natural gas. In 1971, data for these gases were included in code 960011, other fuels.

- Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimates did not meet publication standards.
(Z) Less than half of the unit of measurement shown.

MAJOR GROUP 21

Tobacco Manufactures

21A Tobacco products

This major group includes establishments engaged in manufacturing cigarettes, cigars, smoking and chewing tobacco, and snuff, and in stemming and redrying tobacco. The manufacture of insecticides from tobacco byproducts is included in Major Group 28.

TABLE 1. General Statistics: 1972 and Earlier Years

(See appendix, Explanation of Terms)

| Year and item | Establishments | | All employees ¹ | | Production workers | | | Value added by manufacture ² | Cost of materials ³ | Value of industry shipments ³ | Capital expenditures, new ⁴ |

(X) Not applicable. (NA) Not available. (S) Withheld because the data did not meet publication standards.

¹The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.²For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. For 1921 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See "Value Added by Manufacture" in Introduction.³The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.⁴The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.⁵See appendix C' of the General Summary for the 1972 changes in the Standard Industrial Classification.⁶In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative offices and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966, and prior to 1949.⁷These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.⁸The figures for value added by manufacture are omitted because they include Internal Revenue taxes.

TABLE 2. General Statistics by Geographic Area: 1972 and 1967

(See appendix, Explanation of Terms)

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

²The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

EXPLANATORY TEXT

TOBACCO PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2111—Cigarettes

2121—Cigars

2131—Tobacco (Chewing and Smoking) and Snuff*

2141—Tobacco Stemming and Redrying

The general statistics (employment, payroll, cost of materials, value of production, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing production by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products produced by establishments classified in the specified industry and also the value of primary products of the industry produced as secondary products by establishments classified in other industries.

All tobacco products produced by manufacturing establishments are produced at establishments classified in this major group of industries. The principal companies operating establishments in this major group produce tobacco products of more than one of the tobacco industries. However, for the most part, tobacco products are made at separate establishments of these companies which specialize in the products of a particular industry. Consequently, there is a relatively high degree of primary product specialization within each tobacco industry.

All tobacco products manufactured for sale in this country are subject to a manufacturers' excise tax, except for stemmed and/or redried leaf tobacco which, although classified as "manufactured" tobacco products in the census, are not defined as "manufactured" tobacco products for taxation purposes. In reporting to the census of manufactures, respondents were instructed to report the gross value of each product,

f.o.b. plant, exclusive of excise tax. The costs reported for materials consumed also excluded any excise taxes paid on these materials. This corresponds to the reporting methods followed in the 1967 and 1963 censuses.

In the 1972, 1967, 1963, and 1958 censuses, production rather than shipments data were secured from tobacco manufacturers, because some large manufacturers could not provide accurate information on the value of shipments from their factories. Since most of the products of industry 2141, Tobacco Stemming and Redrying, are consumed as raw materials in one of the other tobacco industries, there is duplication in the aggregate value of production for the major group.

INDUSTRY 2111.—CIGARETTES

This industry comprises establishments primarily engaged in the manufacture of cigarettes. (Establishments primarily engaged in the manufacture of cigars are classified in industry 2121). For a detailed list of products of industry 2111, refer to table 6A, product codes 21110 13 to 21110 57.

Value of production and other receipts of the Cigarettes Industry in 1972 totaled \$3,743.6 million.

Production of cigarettes (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total production (primary and secondary). The industry specialization ratio in 1967 was 97 percent.

Production of cigarettes (primary products) from establishments classified in industry 2111 in 1972 represented 100 percent (coverage ratio) of these products valued at \$3,589.4 million produced by all industries. In 1967, the coverage ratio was also 100 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. No administrative record data were used for this industry.

INDUSTRY 2121.—CIGARS

This industry comprises establishments primarily engaged in the manufacture of cigars. (Establishments primarily engaged in manufacturing cigarettes are classified in industry 2111).

*Note that the "short title" for this industry is used throughout the report.

For a detailed list of products of industry 2121, refer to table 6A, product codes 21210 13 to 21210 02.

Value of production and other receipts of the Cigars Industry in 1972 totaled \$339.7 million. This included production of cigars (primary products), valued at \$324.2 million.

Production of cigars (primary products) in 1972 represented 100 percent (specialization ratio) of the industry's total production (primary and secondary). The industry specialization ratio in 1967 was also 100 percent.

Production of cigars (primary products) from establishments classified in industry 2121 in 1972 represented 91 percent (coverage ratio) of these products valued at \$357.5 million produced by all industries. In 1967, the coverage ratio was 98 percent. Other industries producing cigars consisted mainly of industry 2111, Cigarettes.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2121, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

INDUSTRY 2131.—CHEWING AND SMOKING TOBACCO (Short Title)

This industry comprises establishments primarily engaged in the manufacture of tobacco (chewing and smoking) and snuff. For a detailed list of products of industry 2131, refer to table 6A, product codes 21310 07 to 21310 02.

Value of production and other receipts of the Chewing and Smoking Tobacco Industry in 1972 totaled \$180.2 million. This included production of chewing and smoking tobacco (primary products), valued at \$164.9 million, production of other products (secondary products) valued at \$7.3 million, and miscellaneous receipts (mainly resales) of \$8.0 million.

Production of chewing and smoking tobacco (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total production (primary and secondary). The industry specialization ratio in 1967 was also 96 percent. Secondary products produced by this industry in 1972 consisted mainly of stemmed and redried tobacco.

Production of chewing and smoking tobacco (primary products) from establishments classified in industry 2131 in 1972 represented 64 percent (coverage ratio) of these products valued at \$257.5 million produced by all industries. In 1967,

the coverage ratio was 58 percent. Other industries shipping chewing and smoking tobacco consisted mainly of industry 2111, Cigarettes.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2131, these establishments accounted for less than 1 percent of payroll and less than 1 percent of value added by manufacture.

INDUSTRY 2141.—TOBACCO STEMMING AND REDRYING

This industry comprises establishments primarily engaged in the stemming and redrying of tobacco. (Establishments which sell leaf tobacco as merchant wholesalers, agents, or brokers and which also may be engaged in stemming tobacco are not included in this industry. For a detailed list of products of industry 2141, refer to table 6A, product codes 21411 11 to 21410 02.

Value of production and other receipts of the Tobacco Stemming and Redrying Industry in 1972 totaled \$1,656.8 million. This included production of tobacco, stemmed and redried (primary products), valued at \$1,293.6 million, production of other products (secondary products) valued at \$4.8 million, and miscellaneous receipts (mainly resales) of \$358.4 million.

Production of tobacco, stemmed and redried (primary products) in 1972 represented 100 percent (specialization ratio) of the industry's total production (primary and secondary). The industry specialization ratio in 1967 was also 100 percent.

Production of tobacco, stemmed and redried (primary products) from establishments classified in industry 2141 in 1972 represented 97 percent (coverage ratio) of these products valued at \$1,335.8 million produced by all industries. In 1967, the coverage ratio was 99 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2141, these establishments accounted for 1 percent of payroll and 1 percent of value added by manufacture.

See footnotes on next page.

TABLE 1A. General Statistics: 1958 to 1972—Continued

(Footnotes for table 1A)

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2111 | Industry 2121 | Industry 2131 | Industry 2141 |
|-----------|------------------|------------------|------------------|------------------|
| 1972..... | 7 | 113 | 28 | 46 |
| 1967..... | 8 | 126 | 41 | 54 |
| 1963..... | 7 | 164 | 45 | 59 |

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, the annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of production (dollars) | Cost of materials and payrolls per dollar of production (dollars) | Assets per dollar of production (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for these size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. Where this occurs, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--less than 250 employees BB--250 to 499 employees CC--500 to 99 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

- Represents zero.

¹The proportion of product shipments (both primary and secondary) of the industry represented by primary products.²The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

TABLE 4. General Statistics, by Employment Size of Establishment: 1972

(See appendix, Explanation of Terms)

| Item | Establishments | All employees | | Production workers | | | Value added by manufacture | Cost of materials | Value of production | Capital expenditures, new | End-of-year inventories |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this item.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

(Not applicable to this report)

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Production; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of production | | | | | Value of primary product production | | | |
|--------------|--|---------------------|-------------------|--------------------|------------------------|--------------------------------------|-------------------------------------|-----------------------|--------------------------|-------------------------------|

(D) Withheld to avoid disclosing figures for individual companies.

TABLE 5C. Industry-Product Analysis—Production by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Cigarettes (SIC 2111) | Cigars (SIC 2121) | Chewing and smoking tobacco (SIC 2131) | Tobacco stemming and redrying (SIC 2141) | Other industries |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

(X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies. n.s.k. Not specified by kind.

¹Quantity estimated based on quantity-value relationship reported for other products.

²For these products, contract receipts are reported instead of the value of the packed tobacco. Quantity data were not requested for 1972.

¹These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

Note: In 1967, data for manufactured mixed gas, blast furnace gas, and coke oven gas were included in code 131300, natural gas. In 1971, data for these gases were included in code 960011, other fuels.

- Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimates did not meet publication standards.
(Z) Less than half of the unit of measurement shown.

MAJOR GROUP 22

Textile Mill Products

- 22A Weaving mills
- 22B Knitting mills
- 22C Dyeing and finishing textiles, except wool
fabrics and knit goods
- 22D Floor covering mills
- 22E Yarn and thread mills
- 22F Miscellaneous textile goods

This major group includes establishments engaged in performing any of the following operations: (1) Preparation of fiber and subsequent manufacturing of yarn, thread, braids, twine, and cordage; (2) manufacturing broad woven fabric, narrow woven fabric, knit fabric, and carpets and rugs from yarn; (3) dyeing and finishing fiber, yarn, fabric, and knit apparel; (4) coating, waterproofing, or otherwise treating fabric; (5) the integrated manufacture of knit apparel and other finished articles from yarn; and (6) the manufacture of felt goods, lace goods, nonwoven fabrics, and miscellaneous textiles.

This classification makes no distinction between the two types of organizations which operate in the textile industry: (1) The "integrated" mill which purchases materials, produces textiles and related articles within the establishment, and sells the finished products; and (2) the "contract" or "commission" mill which processes materials owned by others. Converters or other nonmanufacturing establishments which assign materials to contract mills for processing (other than knitting) are classified in nonmanufacturing industries; establishments which assign yarns to outside contractors or commission knitters for the production of knit products are classified in group 225.

(X) Not applicable. (NA) Not available.

¹The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.²For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. For industries reporting the value of production, the adjustment for the change in finished products inventories was not made. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work in process during the year. For 1899 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See Introduction, "Value Added by Manufacture."³The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.⁴The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.⁵See appendix C of the General Summary for the 1972 changes in the Standard Industrial Classification.⁶In addition to data for operating establishments, 1954, 1958, 1963, and 1967 data are shown for manufacturers' central administrative offices and auxiliary units. Similar data are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, and prior to 1949.⁷The 1958 to 1963 data are not completely comparable to data shown for prior years. In 1958 to 1963, establishments primarily producing hats, except cloth, and millinery were included in Major Group 23, while establishments primarily producing hard-surface floor covering, except asbestos, plastic or rubber, were included in Major Group 39. In 1957 and prior years, they were included in Major Group 22. The 1957 employment in these industries was 12,428 for the hats, except millinery, industries and 8,736 for the hard-surface floor covering industry. In addition, establishments primarily engaged in shrinking and sponging of cloth are classified in Major Group 22 for 1958 but were included in Major Group 23 for 1957 and prior years. Such establishments had 1,723 employees in 1958.⁸These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.⁹Data for 1953 and prior years include establishments classified under the 1954 SIC in industry 2274, Hard Surface Floor Covering. Such establishments are excluded from the data for 1954 and subsequent years. In 1953 this industry had 10,374 employees and \$102,337 thousand value added by manufacture.¹⁰The figures for 1939 and 1937 include data for establishments that cut and stitch products from knit cloth made in separate mills of integrated companies. For other years, data for these establishments are included in the figures for the apparel and related products industries.

TABLE 2. General Statistics by Geographic Area: 1972 and 1967

(See appendix, Explanation of Terms)

| 1972 code | Industry and geographic area ¹ | 1972 | | | | | | | | | | | 1967 | |

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

²The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

EXPLANATORY TEXT

WEAVING MILLS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2211—Broadwoven Fabric Mills, Cotton*

2221—Broadwoven Fabric Mills, Manmade Fiber and Silk*

2231—Broadwoven Fabric Mills, Wool (Including Dyeing and Finishing)*

2241—Narrow Fabrics and Other Smallwares Mills: Cotton, Wool, Silk, and Manmade Fiber*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Textile fabric production processes may be grouped broadly into three stages: Fiber preparation and yarn spinning; weaving, knitting, or braiding yarns into gray or unfinished fabric; and bleaching, dyeing, or printing gray fabric to produce finished goods ready for cutting. A textile "establishment," as the term is used in this report, comprises a building or group of buildings at a single location. Many textile establishments are engaged in two of the three major production processes or more, and some are also engaged in fabricating end products such as towels, blankets, sheets, and pillowcases.

In classifying textile establishments by SIC industry, preference was given to weaving or knitting as against spinning, finishing, or fabricating. Thus, an integrated cotton mill

producing only sheets and pillowcases would be classified in SIC industry 2211, Broadwoven Fabric Mills, Cotton, even though the end product of the establishment was not broadwoven fabrics but finished sheets and pillowcases.

This report covers all cotton, wool, silk, and manmade fiber weaving mills, whether integrated or nonintegrated. The integrated textile weaving mills manufacture and consume spun and thrown yarns, and also bleach, dye, or otherwise finish gray goods. Fabrication (cutting and sewing) in weaving mills is largely confined to mass-produced goods such as domestics and blankets. The extent of integration as it affects the end products (shipments) of the establishments covered in this report is indicated in table 5C.

Similar data for knitting mills are included in MC72(2)-22B, Knitting Mills. Statistics for other textile establishments, such as yarn mills or finishing plants, are shown in other reports in this series. Carpet and rug production is covered in MC72(2)-22D, Floor Covering Mills.

The Census Bureau conducts a quarterly survey of weaving mill production of broadwoven goods. This survey includes data for detailed fabric production in linear yards, looms assigned to the production of specific fabrics at the end of the quarter, loom-hours operated, and yarn consumption and stocks. These data are published in the Current Industrial Reports, series MQ-22T.1, Cotton Broadwoven Goods; MQ-22T.2, Manmade Fiber Broadwoven Goods; and MQ-22T.3, Wool Broadwoven Goods. A separate survey was conducted for the first quarter of 1972 in which detailed fabric production data were collected in linear yards, square yards, and pounds. These data, together with information previously collected in earlier censuses of manufactures, were published as supplements to the three current reports mentioned above.

Annual data were also collected for the production of fabric blends and mixtures in 1965, 1962, 1960, and 1958. This information was published in the form of supplements to the broadwoven fabric surveys (series MQ-22T).

An annual survey of cotton, manmade fiber, and silk broadwoven fabrics finished is also conducted by the Bureau of the Census. In this survey, data for the quantity of fabrics finished are collected for 21 classes. For each class, information is shown for the three major types of finished goods (whites, plain colors, and prints). Separate data are also collected for the production of crease-resistant fabrics and published in Current Industrial Reports, series MA-22S, Broadwoven Fabrics Finished. Establishments shipping sheets, pillowcases, and towels report data for these products annually on Census Form MA-23X, "Sheets, Pillowcases, and Towels."

*Note that the "short title" for this industry is used throughout the report.

The 1972 data as previously published for this survey are shown in table 6A together with the comparable totals reported in the census of manufactures.

Establishments shipping narrow fabrics other than covered rubber thread report their shipments of products annually on Census Form MA-22G, Narrow Fabrics. The 1972 data as previously published for this survey are shown in table 6A together with the comparable totals reported in the census of manufactures.

Because of the availability of the detailed reports described above for these industries, the product information collected in the census of manufactures is limited to summary data as shown in table 6A. However, for sheets, pillowcases, towels, and narrow fabrics, the detailed information published in the annual Current Industrial Reports is also shown in table 6A.

INDUSTRY 2211.—WEAVING MILLS, COTTON (Short Title)

This industry comprises establishments primarily engaged in weaving fabrics over 12 inches in width, wholly or chiefly of cotton. Establishments primarily engaged in weaving cotton carpets and rugs are classified in industry 2271; those tufting carpets and rugs in industry 2272; those making tire cord and fabric in industry 2296; and finishers of cotton broadwoven fabrics in industry 2261. For a detailed list of products of industry 2211, refer to table 6A, product codes 22111 00 to 22110 98.

The code number and the definition of this industry were unchanged between 1972 and 1967.

In the product coding system for the 1972 and 1967 censuses of manufactures, finished cotton fabrics and certain cotton fabricated products were classified as primary to industry 2211 when made in weaving mills. Similar products made in nonweaving establishments were classified as primary to the appropriate industry; for example, sheets made in strictly cut-and-sew plants were classified as primary to industry 2392, Housefurnishings, N.E.C. This distinction is important in relation to the specialization and coverage ratios of the industry which are described below.

Value of shipments and other receipts of the Weaving Mills, Cotton, Industry in 1972 totaled \$2,660.6 million. This included shipments of cotton broadwoven fabrics (primary products) valued at \$2,207.7 million, shipments of other products (secondary products) valued at \$417.2 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$35.7 million.

Shipments of cotton broadwoven fabrics (primary products) in 1972 represented 84 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 87 percent.

Secondary products shipped by this industry in 1972 consisted mainly of manmade fiber and silk broadwoven fabrics (\$311.2 million) and yarn, except wool, (\$61.4 million).

Shipments of cotton broadwoven fabrics (primary products) from establishments classified in industry 2211 in 1972 represented 60 percent (coverage ratio) of these products valued at \$3,673.2 million shipped by all industries. In 1967, the coverage ratio was 79 percent. Other industries shipping cotton broadwoven fabrics consisted mainly of industry 2221, Weaving Mills, Manmade Fiber and Silk, (\$350.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2211, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2221.—WEAVING MILLS, MANMADE FIBER AND SILK (Short Title)

This industry comprises establishments primarily engaged in weaving fabrics over 12 inches in width, wholly or chiefly of silk and manmade fibers, including glass. Establishments primarily engaged in weaving carpets and rugs from these fibers are classified in industry 2271; those tufting carpets and rugs from these fibers, in industry 2272; those making tire cord and fabric, in industry 2296; and finishers of manmade fiber and silk broadwoven goods, in industry 2262. For a detailed list of products of industry 2221, refer to table 6A, product codes 22211 00 to 22219 25.

The code number and the definition of this industry were unchanged between 1972 and 1967.

In the product coding system for the 1972 and 1967 censuses of manufactures, finished manmade fiber and silk fabrics and blankets were classified as primary to industry 2221 when made in weaving mills. Similar products made in nonweaving establishments were classified as primary to the appropriate industry; for example, manmade fiber fabrics finished in establishments engaged only in dyeing or printing were classified as primary to industry 2262, Finishing Plants, Manmade Fiber and Silk. This distinction is important in relation to the specialization and coverage ratios of the industry which are described below.

Value of shipments and other receipts of the Weaving Mills, Manmade Fiber and Silk, Industry in 1972 totaled \$3,856.5 million. This included shipments of manmade fiber and silk broadwoven fabric (primary products) valued at \$3,064.7

million, shipments of other products (secondary products) valued at \$739.0 million, and miscellaneous receipts (mainly contract work on material owned by others) of \$52.8 million.

Shipments of manmade fiber and silk broadwoven fabrics (primary products) in 1972 represented 81 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 85 percent. Secondary products shipped by this industry in 1972 consisted mainly of cotton broadwoven fabrics (\$350.3 million) and yarn, except wool, (\$116.1 million).

Shipments of manmade fiber and silk broadwoven fabrics (primary products) from establishments classified in industry 2221 in 1972 represented 76 percent (coverage ratio) of these products valued at \$4,114.5 million shipped by all industries. In 1967, the coverage ratio was also 74 percent. Other industries shipping manmade fiber and silk broadwoven fabrics consisted mainly of industry 2211, Weaving Mills, Cotton, (\$311.2 million) and industry 2231, Weaving and Finishing Mills, Wool, (over \$2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2221, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2231.—WEAVING AND FINISHING MILLS, WOOL (Short Title)

This industry comprises establishments primarily engaged in weaving fabrics over 12 inches in width, wholly or chiefly by weight of wool, mohair, or similar animal fibers; in dyeing and finishing woven wool fabrics or in dyeing wool, tops, or yarn; and in shrinking and sponging wool goods for the trade. Establishments primarily engaged in weaving wool carpets and rugs are classified in industry 2271, and those engaged in tufting wool carpets and rugs in industry 2272. For a detailed list of products of industry 2231, refer to table 6A, product codes 22311 11 to 22319 23.

The code number and the definition of this industry were unchanged between 1972 and 1967.

Value of shipments and other receipts of the Weaving and Finishing Mills, Wool, Industry in 1972 totaled \$450.1 million. This included shipments of woven wool fabrics (primary products) valued at \$364.5 million, shipments of other products (secondary products) valued at \$68.4 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$17.2 million.

Shipments of woven wool fabrics (primary products) in 1972 represented 84 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 82 percent. Secondary products shipped by this industry in 1972 consisted mainly of manmade fiber and silk broadwoven fabrics (over \$2 million) and yarn, except wool, (\$11.3 million).

Shipments of woven wool fabrics (primary products) from establishments classified in industry 2231 in 1972 represented 83 percent (coverage ratio) of these products valued at \$440.7 million shipped by all industries. In 1967, the coverage ratio was 96 percent. Other industries shipping woven wool fabrics consisted mainly of industry 2221, Weaving Mills, Manmade Fiber and Silk, (over \$2 million) and industry 2257, Circular Knit Fabric Mills, (\$26.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2231, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 2241.—NARROW FABRIC MILLS (Short Title)

This industry comprises establishments primarily engaged in weaving or braiding fabrics 12 inches in width or narrower of cotton, wool, silk, and manmade fibers, including glass fibers. Establishments primarily engaged in weaving or braiding fabrics 12 inches in width or narrower of fabric-covered elastic yarn are also included in this industry. For a detailed list of products of industry 2241, refer to table 6A, product codes 22411 00 to 22415 11.

The code number and the definition of this industry were unchanged between 1972 and 1967.

Value of shipments and other receipts of the Narrow Fabric Mills Industry in 1972 totaled \$566.2 million. This included shipments of narrow fabrics (primary products) valued at \$505.9 million, shipments of other products (secondary products) valued at \$36.2 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$24.1 million.

Shipments of narrow fabrics (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 94 percent. Secondary products shipped by this industry in 1972 consisted mainly of warp knit fabric (\$7.7 million) and textile finishing, n.e.c., (\$5 to \$10 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 87 percent of the total industry shipments are represented by plants specializing in product classes: 67 percent in woven narrow fabrics; and 20 percent in braided narrow fabrics.

Shipments of narrow fabrics (primary products) from establishments classified in industry 2241 in 1972 represented 97 percent (coverage ratio) of these products valued at \$521.5

million shipped by all industries. In 1967, the coverage ratio was 96 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2241, these establishments accounted for 8 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|---|----------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | | | | |

TABLE 1A. General Statistics: 1958 to 1972—Continued

(Footnotes for table 1A)

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2211 | Industry 2221 | Industry 2231 | Industry 2241 |
|-----------|------------------|------------------|------------------|------------------|
| 1972..... | 190 | 256 | 178 | 323 |
| 1967..... | 218 | 272 | 262 | 345 |
| 1963..... | 229 | 277 | 304 | 350 |

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (2) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

See footnote at end of table.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization:
1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

(D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|-----------|--|--------------------|-------------------|--------------------|------------------------|--------------------------------------|------------------------------------|-----------------------|--------------------------|-------------------------------|
| | | Total | Primary products | Secondary products | Miscellaneous receipts | Primary product specialization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio |
| | | (million dollars) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. B & C (percent) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. F (percent) |
| | | A | B | C | D | E | F | G | H | I |

| 2241 | Narrow fabric mills.....1972.. | 566.2 | 505.9 | 36.2 | 24.1 | 93 | 521.5 | 505.9 | 15.6 | 97 |
| |1967.. | 445.1 | 393.7 | 25.5 | 25.9 | 94 | 411.0 | 393.7 | 17.3 | 96 |

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Weaving mills, cotton (SIC 2211) | Weaving mills, manmade fiber and silk (SIC 2221) | Weaving and finishing mills, wool (SIC 2231) | Narrow fabric mills (SIC 2241) | Other industries |

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | Other industries | Product code | Industry, class of products, and miscellaneous receipts | Other industries |
|--------------|---|------------------|--------------|--|------------------|
| | Listing of other industries with over \$2 million shipments of the primary products | | | Listing of other industries with over \$2 million shipments of the primary products--Continued | |
| 2211- | 2281 Yarn mills, except wool..... | 4.8 | 2221- | 2291 Felt goods, except woven felts and hats..... | (2-5) |
| | 2296 Tire cord and fabric..... | 5.9 | | 2295 Coated fabrics, not rubberized..... | 3.3 |
| | 2297 Nonwoven fabrics..... | (2-5) | | 2296 Tire cord and fabric..... | 19.3 |
| | 2391 Curtains and draperies..... | (2-5) | | 2297 Nonwoven fabrics..... | 5.0 |
| | 2392 Housefurnishings, n.e.c..... | 7.9 | | 3041 Rubber and plastics hose and belting..... | (2-5) |
| | 2844 Toilet preparations..... | (2-5) | | | |
| | 3041 Rubber and plastics hose and belting..... | 5.6 | 2231- | 2257 Circular knit fabric mills..... | 26.2 |
| 2221- | 2257 Circular knit fabric mills..... | 26.2 | | 2258 Warp knit fabric mills..... | (2-5) |
| | 2258 Warp knit fabric mills..... | 3.2 | | 2262 Finishing plants, manmade fiber and silk..... | 8.4 |
| | 2272 Tufted carpets and rugs..... | 8.5 | | 2282 Throwing and winding mills..... | (2-5) |
| | 2279 Carpets and Rugs, n.e.c..... | (2-5) | | 2283 Wool yarn mills..... | (over 2) |
| | 2281 Yarn mills, except wool..... | 17.5 | | 2291 Felt goods, except woven felts and hats..... | (2-5) |
| | 2282 Throwing and winding mills..... | (over 2) | 2241- | 3041 Rubber and plastics hose and belting..... | 2.2 |

Note: Data shown parenthetically are ranges expressed in millions of dollars. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

- Represents zero. (X) Not applicable. (Z) Less than half of the unit of measurement shown.

¹Includes \$263.4 million from product class 22617.

²Includes \$107.9 million from product class 23926 and 23990.

³Includes \$594.5 million from product class 22628.

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

| 22410 00 | Narrow fabrics, n.s.k., for companies with 10 employees or more. (See note.)..... | | (X) | 15.2 | (X) | 6.7 |
| 22410 02 | Narrow fabrics, n.s.k., for companies with less than 10 employees. (See note.)..... | | (X) | 7.3 | (X) | 4.8 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹Data for selected fabricated products that are made in significant amounts from cotton fabrics at cotton weaving mills are shown in this table. Data for other fabricated products such as bags, tents, housefurnishings, etc., which are also made at weaving mills but not by a large number of plants are published in other census of manufactures reports.

²Excludes quantity data for other finished fabrics and finished fabrics, not specified by kind.

Footnotes continued on next page.

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Footnotes for table 6A)—Continued

³Production data for gray goods with a detailed breakdown by type of fabric are collected on a quarterly basis and published in Current Industrial Reports, series MQ-22T.1, Cotton Broadwoven Goods; MQ-22T.2, Manmade Fiber Broadwoven Goods; and MQ-22T.3, Wool Broadwoven Goods. In special supplements for the first quarter of 1972, detailed data including prior-year information were also published for average weight and width of fabric production. Because of reporting differences by individual companies and some misclassification of fabrics, the data shown in this report differ from that published in the current survey. However, the summary figures as published in Current Industrial Reports series MQ-22T.1 are shown here for comparative purposes.

| Code | Product | Unit of measure | Total production-- CIR Survey MQ-22T | |
|----------|---|----------------------|---|-------|
| | | | 1972 | |
| 22111 10 | Cotton duck and allied fabrics (including combed duck)..... | 1,000 lin. yd..... | 150.5 | |

| 22312 30 | Woolen and worsted nonapparel fabrics..... | ...do..... | 6.0 | 11.8 |
| 22312 50 | Woven wool felts..... | 1,000 lb..... | 7.7 | 8.5 |

⁴Production data for finished fabrics are published in Current Industrial Reports, series MA-22S, Broadwoven Goods Finished. This report also furnishes detailed information by type of fabric finished within major end use categories. Data for cotton fabrics finished on commission are shown in the census of manufactures reports on industry 2261 and 2262.

⁵Excludes fabrics not specified by kind and commission finishing.

⁶Excludes other finished fabrics, fabrics not specified by kind, and commission finishing.

⁷In the report MC72(2)-23E, Miscellaneous Fabricated Textile Products, data are shown for manmade fiber bedspreads and bedsets. In addition, bedspreads and bedsets were reported without fiber identification. Such products are also shown in the report MC72(2)-23E, and are excluded from this table.

⁸Information on narrow fabrics is collected on an annual basis and published in Current Industrial Report, series MA-22G, Narrow Fabrics. The detail shown in this table is from that report. Differences between the data collected in the census of manufactures and the current survey are the result of reporting differences for individual plants furnishing data in the two surveys.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

(NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²Value of shipments for this 4-digit group contains extensive duplication. Such duplication arises where the products of some establishments are used as materials by other establishments classified in the same industry.

TABLE 7A. Materials Consumed, by Kind: 1972 and 1967

- Represents zero. (X) Not applicable. (NA) Not available. ^eFrom 10 to 30 percent of this figure was estimated.

¹Yarn consumption data for cotton and manmade fiber and silk weaving mills are collected and published quarterly in Current Industrial Reports series MQ-22T.1 and MQ-22T.2.

²This item represents the total cost of materials for establishments that did not report detailed materials data. This includes estimates for companies that were not mailed report forms.

³In 1967, these materials were included in all other materials, containers, and supplies consumed, code 970099.

⁴In 1967, polyester staple and tow were included in all other manmade fiber staple and tow, except glass.

⁵Yarn consumption data for narrow fabric mills are collected and published annually in Current Industrial Reports series MA-22G, Narrow Fabrics. The information shown in this table is from that report. The yarn consumed in the manufacture of covered rubber thread is not included in the above data.

EXPLANATORY TEXT

KNITTING MILLS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2251—Women's Full-Length and Knee-Length Hosiery*
- 2252—Hosiery, Except Women's Full-Length and Knee-Length Hosiery*
- 2253—Knit Outerwear Mills
- 2254—Knit Underwear Mills
- 2257—Circular Knit Fabric Mills
- 2258—Warp Knit Fabric Mills
- 2259—Knitting Mills, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Patterns of Operation.—The knitting industries are characterized by three major types of establishment operations. These operations and the census method of classification are as follows:

1. Establishments producing knit products from yarn owned by the knitting establishment, or dyeing and finishing knit products for their own account, are included in this report as manufacturers;
2. Establishments which knit fabric from yarns owned by others, or dye and finish knit products owned by others, are included in this report as contractors; and
3. Establishments which purchase yarns or greige goods and employ contract knitters or dyers to process the materials for their own account are included in this report as converters.

The converters perform the entrepreneurial functions of a manufacturing company, such as buying raw materials, arranging for the knitting and finishing, and selling the final product. The actual processing of the yarns or greige goods into the final product is performed on contract by a commission knitter and finisher. The converters should be differentiated from the wholesalers or dealers that purchase and resell finished knitted products, but do not perform the functions of the knitting converter. Establishments of multiunit companies are classified on the basis of the functions performed at each location rather than on characteristics of the company as a whole.

Wholesalers and dealers are classified in the wholesale trade industries and the data are included in the 1972 Census of Wholesale Trade.

Method of Reporting on Census Questionnaires.—Typically, the knitting manufacturer reports figures on employment, including production workers, cost of yarns or greige goods and other materials purchased, and the value of products made by him from his own materials. The knitting converter will show, in addition to his cost of materials, a cost of contract work and the value of products made for him by others from his materials. The typical knitting converter's report shows few, if any, production workers and his labor costs are represented in his "cost of contract work."

The contractor, on the other hand, reports figures on employment, primarily production workers. His cost of materials would exclude the basic yarn or greige goods costs but would include costs for other materials consumed, such as dyestuffs. As the contractor performs a commission operation on materials owned by others, his entire receipts would represent the amount received for knitting and other processing that he has performed on materials owned by others. These receipts are generally shown separately in table 5C. In other tables they are included under the classifications of "Value of Shipments."

The production or shipments data shown in table 6A include the quantity produced by manufacturers for their own account and the quantity produced for converters from their materials by contractors. To the extent that some contractors may also produce products for their own account, that production is also included in table 6A.

Classification of Establishments.—Since these different methods of operation lead to significant differences in the

* Note that the "short title" for this industry is used throughout the report.

various relationships between wages and salaries paid, cost of materials, value of production, and value added by manufacture, plants were classified by their primary method of operation as manufacturers, converters, or contractors. Wherever possible, separate statistics for each group are shown in tables 2 to 4. It should be noted, however, that many establishments in these industries employ more than one method of operation. For example, some establishments act as both manufacturer and converter. In assigning the primary method of operation for manufacturer-converter plants, the relationship between wages and salaries paid to the cost of contract work was the determining factor. If wage and salary payments exceeded contract payments, the plant was classified as a manufacturer. If the contract payment exceeded the wage and salary payments, the plant was classified as a converter. Similarly, for manufacturer-contractor plants, the relationship between the value of products made for their own account was compared with the receipts for work done on materials owned by other establishments to determine the plant's primary method of operation.

INDUSTRY 2251.—WOMEN'S HOSIERY, EXCEPT SOCKS (Short Title)

This industry comprises establishments primarily engaged in knitting, dyeing, or finishing women's and misses' full-length and knee-length hosiery, both seamless and full-fashioned. For a detailed list of products of industry 2251, refer to table 6A, product codes 22511 11 to 22515 15.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Figures on the total cost of materials and value of shipments of industry 2251, Women's Hosiery, Except Socks, include a substantial amount of duplication. The value of hosiery shipped in the greige is, in effect, counted twice: Once as a shipment of the establishment producing greige goods to the dyeing and finishing plant and again in the value of finished hosiery shipped by the dyeing and finishing plant. The extent of this duplication is measured in table 5C, which shows that approximately 11 percent of the industry's shipments represent women's seamless full-length and knee-length hosiery shipped in the greige. One percent of the industry's shipments represented women's full-fashioned hosiery shipped in the greige. Similarly, the cost of materials figures would also contain some duplication, but a measure of the duplication is not available.

Value of shipments and other receipts of the Women's Hosiery, Except Socks, Industry in 1972 totaled \$984.7 million. This included shipments of women's hosiery, except socks, (primary products) valued at \$875.7 million, shipments of other products (secondary products) valued at \$59.2 million, and miscellaneous receipts of \$49.8 million.

Shipments of women's hosiery, except socks, (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of hosiery, n.e.c., (\$26.5 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 84 percent of the total industry shipments are represented by plants specializing in product class 22513, Women's finished seamless hosiery, full-length and knee-length; and 10 percent in product class 22515, Women's seamless full-length and knee-length hosiery shipped in the greige.

Shipments of women's hosiery, except socks, (primary products) from establishments classified in industry 2251 in 1972 represented 97 percent (coverage ratio) of these products valued at \$899.0 million shipped by all industries. In 1967, the coverage ratio was 95 percent. Other industries shipping women's hosiery, except socks, consisted mainly of industry 2252, Hosiery, N.E.C., (\$19.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2251, these establishments accounted for 2 percent of value of shipments.

INDUSTRY 2252.—HOSIERY, N.E.C. (Short Title)

This industry comprises establishments primarily engaged in knitting, dyeing, or finishing hosiery except women's and misses' full-length and knee-length seamless and full-fashioned hosiery. For a detailed list of products of industry 2252, refer to table 6A, product codes 22522 23 to 22524 51.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

The value of shipments and cost of materials data of industry 2252, Hosiery, N.E.C., include a substantial amount of duplication. The value of hosiery shipped in the greige is, in effect, counted twice: Once as a shipment of the establishment producing greige goods to the dyeing and finishing plant and again in the value of finished hosiery shipped by the dyeing and finishing plant. The extent of this duplication is measured in table 5C, which shows that approximately 14 percent of the industry's shipments represent women's seamless full-length and knee-length hosiery shipped in the greige.

EXPLANATORY TEXT—Continued

Value of shipments and other receipts of the Hosiery, N.E.C., Industry in 1972 totaled \$600.6 million. This included shipments of hosiery, n.e.c., (primary products) valued at \$550.4 million, shipments of other products (secondary products) valued at \$26.6 million, and miscellaneous receipts of \$23.6 million.

Shipments of hosiery, n.e.c., (primary products) in 1972 represented 95 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 90 percent. Secondary products shipped by this industry in 1972 consisted mainly of women's hosiery, except socks, (\$19.2 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 47 percent of the total industry shipments are represented by plants specializing in product class 22522, Men's finished seamless hosiery; and 35 percent in product class 22523, All other finished seamless hosiery.

Shipments of hosiery, n.e.c., (primary products) from establishments classified in industry 2252 in 1972 represented 94 percent (coverage ratio) of these products valued at \$588.0 million shipped by all industries. In 1967, the coverage ratio was 95 percent. Other industries shipping hosiery, n.e.c., consisted mainly of industry 2251, Women's Hosiery, Except Socks, (\$26.5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2252, these establishments accounted for 15 percent of value of shipments.

INDUSTRY 2253.—KNIT OUTERWEAR MILLS

This industry comprises establishments primarily engaged in knitting outerwear from yarn, or in manufacturing outerwear from knit fabric produced in the same establishment. Establishments primarily engaged in handknitting outerwear for the trade are included in this industry. Establishments primarily engaged in manufacturing woven or purchased knit fabric gloves and mittens are classified in industry 2381 (Fabric Dress and Work Gloves), and those manufacturing outerwear from purchased knit fabric in SIC Major Group 23 (Apparel and Other Textile Products). For a detailed list of products of industry 2253, refer to table 6A, product codes 22531 10 to 22533 60.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of Knit Outerwear Mills in 1972 totaled \$1,703.8 million. This included shipments of knit outerwear (primary products) valued at \$1,510.3 million, shipments of other products (secondary products) valued at \$122.6 million, and miscellaneous receipts of \$70.9 million.

Shipments of knit outerwear (primary products) in 1972 represented 92 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 93 percent. Secondary products shipped by this industry in 1972 consisted mainly of circular knit fabric (\$56.6 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 32 percent of the total industry shipments are represented by plants specializing in product class 22531, Sweaters, knit jackets, and jerseys; and 25 percent in product class 22532, Knit outerwear sportshirts.

Knit outerwear made in knitting mills is classified as primary products of industry 2253, Knit Outerwear Mills, while the shipment of knit outerwear cut and sewed from purchased knit fabric is included in industries 2321, 2329, 2331, 2339, 2361, and 2369. In order to show the total value of knit outerwear made by all industries (regardless of the method of production), values for the 2253--- and 23----- shipments are given in tables 5C and 6A. Using the combined figure of \$2,393.6 million of knit outerwear as the base, industry 2253, in 1972, accounted for 63 percent of the total dollar value of these products. In 1967, the coverage ratio was 65 percent. Other knitting industries making knit outerwear consisted mainly of industry 2254, Knit Underwear Mills, (\$31.8 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2253, these establishments accounted for 8 percent of value of shipments.

INDUSTRY 2254.—KNIT UNDERWEAR MILLS

This industry comprises establishments primarily engaged in knitting underwear and nightwear from yarn, or in manufacturing underwear and nightwear from knit fabric produced in the same establishment. Establishments primarily engaged in

manufacturing underwear and nightwear from purchased knit fabric are classified in Major Group 23 (Apparel and Other Textile Products). For a detailed list of products of industry 2254, refer to table 6A, product codes 22541 10 to 22543 00.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Knit Underwear Mills in 1972 totaled \$544.6 million. This included shipments of knit underwear and nightwear (primary products) valued at \$450.4 million, shipments of other products (secondary products) valued at \$50.6 million, and miscellaneous receipts of \$43.6 million.

Shipments of knit underwear and nightwear (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 85 percent. Secondary products shipped by this industry in 1972 consisted mainly of knit outerwear (\$31.8 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 76 percent of the total industry shipments are represented by plants specializing in product class 22541, Men's and boys' knit underwear and nightwear.

Shipments of knit underwear and nightwear (primary products) from establishments classified in industry 2254 in 1972 represented 94 percent (coverage ratio) of these products valued at \$481.5 million shipped by all industries. In 1967, the coverage ratio was 91 percent. Other industries shipping knit underwear and nightwear consisted mainly of industry 2253, Knit Outerwear Mills, (\$15.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2254, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2257.—CIRCULAR KNIT FABRIC MILLS

This industry comprises establishments primarily engaged in knitting circular (tubular) fabric or in dyeing or finishing circular (tubular) knit fabric. Establishments primarily engaged in knitting, dyeing, or finishing warp fabric are classified in industry 2258. For a detailed list of products of industry 2257, refer to table 6A, product codes 22571 00 to 22576 00.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. At the same time, a new SIC number and title were assigned. The statistics of this industry, under the classification system followed in the 1967 census, were split as a result of the 1972 edition of the SIC manual into two separate industries: 2257, Circular Knit Fabric, and 2258, Warp Knit Fabric. The effect of the revisions are summarized in table 1C. "Composition of New (1972) SIC Industries Based on Old (1967) SIC."

Value of shipments and other receipts of the Circular Knit Fabric Mills in 1972 totaled \$2,808.8 million. This included shipments of circular knit fabric (primary products) valued at \$2,513.5 million, shipments of other products (secondary products) valued at \$194.2 million, and miscellaneous receipts of \$101.1 million.

Shipments of circular knit fabric (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of finishing plant products, manmade fiber and silk, (\$37.2 million) and yarn mill products, except wool, (\$28.8 million).

Shipments of circular knit fabric (primary products) from establishments classified in industry 2257 in 1972 represented 91 percent (coverage ratio) of these products valued at \$2,770.2 million shipped by all industries. Other industries shipping circular knit fabric consisted mainly of industry 2221, Weaving Mills, Manmade Fiber and Silk, (\$69.1 million) and industry 2258, Warp Knit Fabric Mills, (\$67.1 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2257, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 2258.—WARP KNIT FABRIC MILLS

This industry comprises establishments primarily engaged in knitting warp (flat fabric) or in dyeing or finishing warp (flat) knit fabric. Establishments primarily engaged in knitting, dyeing, or finishing circular fabric are classified in industry 2257. For a detailed list of products of industry 2258, refer to table 6A, product codes 22581 00 to 22584 00.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. At the same time a new SIC number and title were assigned. The statistics of this industry,

under the classification system followed in the 1967 census, were split as a result of the 1972 edition of the SIC manual into two separate industries: 2257, Circular Knit Fabric, and 2258, Warp Knit Fabric. The effect of the revisions are summarized in table 1C. "Composition of New (1972) SIC Industries Based on Old (1967) SIC."

Value of shipments and other receipts of the Warp Knit Fabric Mills in 1972 totaled \$987.7 million. This included shipments of warp knit fabric (primary products) valued at \$879.4 million, shipments of other products (secondary products) valued at \$95.7 million, and miscellaneous receipts of \$12.6 million.

Shipments of warp knit fabric (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of circular knit fabric mill products (\$67.1 million).

Shipments of warp knit fabric (primary products) from establishments classified in industry 2258 in 1972 represented 95 percent (coverage ratio) of these products valued at \$928.6 million shipped by all industries. Other industries shipping warp knit fabric consisted mainly of industry 2257, Circular Knit Fabric Mills, (\$12.0 million) and industry 2221, Weaving Mills, Manmade Fiber and Silk, (\$9.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2258, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2259.—KNITTING MILLS, N.E.C.

This industry comprises establishments primarily engaged in knitting gloves and other articles, not elsewhere classified. For a detailed list of products of industry 2259, refer to table 6A, product codes 22590 10 to 22590 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of Knitting Mills, N.E.C., in 1972 totaled \$73.1 million. This included shipments of knitting mill products, n.e.c., (primary products) valued at \$67.7 million, shipments of other products (secondary products) valued at \$4.8 million, and miscellaneous receipts of \$0.6 million.

Shipments of knitting mills, n.e.c., (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 96 percent.

Shipments of knitting mills, n.e.c., (primary products) from establishments classified in industry 2259 in 1972 represented 78 percent (coverage ratio) of these products valued at \$87.1 million shipped by all industries. In 1967, the coverage ratio was 88 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2259, these establishments accounted for 16 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|---|------------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|-----------------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | | | | |
| | (number) | (number) | (1,000) | (million dollars) | (1,000) | (millions) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (percent) | (percent) |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2251 | Industry 2252 | Industry 2253 | Industry 2254 | Industry 2257 | Industry 2258 | Industry 2259 |
|-----------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|
| 1972..... | 256 | 375 | 882 | 74 | 629 | 174 | 72 |
| 1967..... | 302 | 423 | 1,156 | 99 | (NA) | (NA) | 61 |
| 1963..... | 363 | 504 | 1,175 | 104 | (NA) | (NA) | 86 |

(NA) Not available. (S) Withheld because the data did not meet publication standards. (Z) Less than half of the unit of measurement shown.

*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²Some of the small establishments in this industry may have been misclassified as to industry. This does not significantly affect the statistics other than the number of establishments or number of companies. (See paragraph in Explanatory Text: "Classification of Establishments" for further explanation.)

³Includes products of cut-and-sew shops (SIC group 23), which are primary to industries 2321, 2329, 2331, 2339, 2361, and 2369. See explanatory text for more detailed discussion. These data for censuses prior to 1963 did not include the cut-and-sew operations and, therefore, are not directly comparable.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

| Industry | Composition of new industry | | | | | Totals for industries on old SIC | | | | |
|---|-----------------------------|---------------------------|---------------|----------------------------|--------------------|----------------------------------|---------------------------|---------------|----------------------------|--------------------|
| | Establishments | | All employees | Value added by manufacture | Value of shipments | Establishments | | All employees | Value added by manufacture | Value of shipments |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above.
(Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balance of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|--|----------------------------|-------------------|------------------------------|--------------------|-------------------------|----------------------------|---|--|---|--|

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization:
1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

(D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|-----------|--|--------------------|-------------------|--------------------|------------------------|--------------------------------------|------------------------------------|-----------------------|--------------------------|-------------------------------|
| | | Total | Primary products | Secondary products | Miscellaneous receipts | Primary product specialization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio |

¹Ratios are affected by duplication in value of shipments. See explanatory text for this industry.

²Includes products of cut-and-sew shops (SIC group 23), which are primary to industries 2321, 2329, 2331, 2339, 2361, and 2369. See explanatory text for more detailed discussion.

³Revised to reflect only shipments of knit products made in knitting mills. Separate data for knit products made in cut-and-sew plants were not collected in 1972.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Women's hosiery, except socks (SIC 2251) | Hosiery, n.e.c. TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| 22589 13 | Receipts for commission knitting and/or dyeing knit fabric..... | | (X) | 95.5 | | |
| | (As shown in CIR Series MQ-22K, Shipments of Knit Cloth, Including Interplant Transfers, Summary for 1972) | | | | | |
| 2259- -- | KNITTING MILL PRODUCTS, N.E.C., TOTAL..... | | (X) | 87.1 | (X) | 35.7 |
| 22590 10 | Dress and semidress gloves and mittens, including knit fabric and leather combinations. | 1,000 dozen pairs. | 834 | 10.0 | 792 | 8.8 |
| 22590 70 | Work gloves and mittens, including knit fabrics and leather combinations..... | ...do..... | 1,488 | 10.9 | 690 | 5.1 |
| 22590 98 | Other knit end products (except fabric), n.e.c., including knitted towels, washcloths, curtains, etc..... | | (X) | 48.6 | (X) | 17.8 |
| 22590 00 | Other knitting mill products, including commission receipts for making knit gloves and mittens, n.s.k., for companies with 10 employees or more. (See note.)..... | | (X) | 14.6 | (X) | 3.2 |
| 22590 02 | Other knitting mill products, including commission receipts for making knit gloves and mittens, n.s.k., for companies with less than 10 employees. (See note.)..... | | (X) | 3.0 | (X) | .8 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review. ⁶From 10 to 30 percent of this figure was estimated.

¹Reported in table 5C as code 93000 commission receipts.

²Product descriptions for 1972 have been revised and are not directly comparable with 1967. Detailed product information for 1967 is published in Volume II, Part I, of the 1967 Census of Manufactures.

³The aggregate as shown includes a substantial amount of duplication. The value of hosiery shipped in the greige is, in effect, counted twice; once as a shipment of the establishment producing greige goods to the dyeing and finishing plant and again in the finished hosiery shipped by the dyeing and finishing plant.

⁴A comparison of the census estimates for each of the detailed item descriptions as shown with information published by the National Association of Hosiery Manufacturers does indicate significant differences in several instances. Some of the differences can be accounted for by those firms included in the n.s.k. categories.

⁵Quantity estimated based on the unit value relationship of reported products in the product class.

⁶Data for sweaters, knit jackets, and jerseys are not directly comparable to the information in census series MA-23A. The census of manufactures figures include knit jackets and jerseys, whereas the MA-23A data exclude these products. See Current Industrial Reports, series MA-23A for product detail.

⁷The data included in this table are only for products made by knitting mills. The 1972 and 1967 quantity and value for each of the products, including output of the cut-and-sew establishments, are shown in industry 2321, Men's and Boys' Shirts and Nightwear; industry 2322, Men's and Boys' Underwear; industry 2341, Women's and Children's Underwear.

⁸Estimated for comparative purposes as separate information between warp and circular-type mills for those cells was not collected.

⁹Approximately 90 percent of the circular knit fabric shipped in the greige is finished in other plants and reported by them as finished. Therefore, some duplication exists in the total shown for circular knit fabric.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9

BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9

EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9

GG.....\$50.0 and over

- Represents zero.

(NA) Not available.

- Represents zero. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²For purposes of comparability with prior years' annual survey of manufacturers data, the value of shipments of the cut-and-sew shops (Group 23) has been excluded. (See tables 5C and 6A.)

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹Included with "All other materials, containers, and supplies."²10 to 30 percent of the quantity was estimated.³30 to 50 percent of the quantity was estimated.⁴This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.⁵Over 50 percent of the quantity was estimated.⁶Includes wool yarns for 1972.⁷Includes wool and manmade fiber filament and spun yarns.⁸Included in material code 228013, All other yarns.

EXPLANATORY TEXT

DYEING AND FINISHING TEXTILES, EXCEPT WOOL FABRICS AND KNIT GOODS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2261—Finishers of Broadwoven Fabrics of Cotton*

2262—Finishers of Broadwoven Fabrics of Manmade Fiber and Silk*

2269—Finishers of Textiles, N.E.C.*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Textile fabric production processes may be grouped broadly into three stages: Fiber preparation, yarn spinning, and yarn dyeing; weaving, knitting, or braiding of yarns into gray or unfinished fabric; and bleaching, dyeing, or printing of gray fabric to produce finished goods ready for cutting. A textile "establishment," as the term is used in this report, comprises a building or group of buildings at a single location. Many textile establishments are engaged in two of the three major production processes or more, and some are also engaged in fabricating end products such as towels, blankets, sheets, and pillowcases.

In classifying textile establishments by SIC industry, preference was given to spinning, weaving, knitting, or fabri-

cating, as opposed to finishing. Thus, an integrated cotton mill producing finished cotton fabrics would be classified in SIC 2211, Weaving Mills, Cotton, even though the end product of the establishment was finished fabrics. Similarly, a nonweaving plant finishing fabrics and further fabricating the cloth into sheets and pillowcases was classified in industry 2392, Housefurnishing, N.E.C.

This report covers all nonintegrated finishing plants, except wool finishing plants which are included in industry 2231, Weaving and Finishing Mills, Wool; finishers of knit products which are classified in SIC group 225, Knitting Mills; and finishers of carpeting included in SIC group 227. The extent of integration at the establishment level and its effect on the shipments of the establishments covered in this report are indicated in tables 5B and 6A. These tables do not, however, show information regarding company integration as opposed to mill integration.

The establishments in these industries were asked to differentiate between goods processed for their own account and for the account of others. Many finishing establishments operated by integrated companies reported operations on company-owned materials as "job or commission finishing" if the finishing plants were treated as a commission finisher in the company records.

Commission dyers and other commission finishers excluded the value of the material processed (fiber, yarn, or fabric) in both the "Cost of Materials," and the "Products Shipped" items. The total cost of materials for the industry, therefore, includes the cost of the goods finished only for establishments finishing for their own account. The "total value of shipments" of the industry is a composite figure including (for commission finishers) receipts for finishing and (for independent finishers) the value of the finished goods shipped or sold.

The differentiation between the commission fabric finishers (including commission finishing for the parent company) and those that finish for their own account is made in tables 3 and 4 which furnishes separate information for finishing plants that specialize in commission work and those that specialize in finishing their own goods.

A substantial amount of fabric, particularly synthetic fabric, is finished on commission for the account of textile converters who buy gray goods from the weaving mills, arrange to have the finishing done, and sell the finished cloth in the apparel or other markets. While the fabric is owned by the converter, the commission finisher usually supplies the dyes and miscellaneous materials which are included in his

*Note that the "short title" for this industry is used throughout the report.

cost of materials as reported in the census. The converter establishment is classified in the wholesale trade industries and is excluded from the census of manufactures. However, such establishments reported in the 1972 Census of Business and data for textile converters are included in the census of business reports.

An annual survey of cotton, synthetic, and silk broadwoven fabrics, finished is conducted by the Bureau of the Census. In this survey, data on the quantity of fabrics finished are collected from finishing plants. For each of 21 classes of fabric, information is shown for the three major types of finished goods (whites, plain colors, and prints: roller and intaglio engraved, and other prints). These statistics are published in Current Industrial Reports, series MA-22S, Broadwoven Fabrics, Finished. Because of the availability of this detailed report, product information relating to finished fabrics that was collected in the census of manufactures and shown in table 6A is limited to summary data.

INDUSTRY 2261.—FINISHING PLANTS, COTTON (Short Title)

This industry comprises establishments primarily engaged in finishing purchased cotton broadwoven fabrics or finishing such fabrics on a commission basis. These finishing operations include bleaching, dyeing, printing (roller, screen, flock, and plisse), and other mechanical finishing such as preshrinking, calendering, and napping. This industry also includes the shrinking and sponging of cloth for the trade and chemical finishing for water repellency, fire resistance, and mildew proofing. Establishments primarily engaged in finishing wool broadwoven fabrics are classified in industry 2231; knit goods in SIC group 225; and those coating or impregnating fabrics in industry 2295. For a detailed list of products of industry 2261, refer to table 6A, product codes 22617 11 to 22619 71.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Finishing Plants, Cotton, Industry in 1972 totaled \$623.3 million. This included shipments of cotton broadwoven finished fabric (primary products) valued at \$468.8 million, shipments of other products (secondary products) valued at \$124.6 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$29.9 million.

Shipments of cotton broadwoven finished fabric (primary products) in 1972 represented 79 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 75 percent.

Secondary products shipped by this industry in 1972 consisted mainly of finished manmade fiber and silk broadwoven fabrics (over \$2 million) and housefurnishings, n.e.c. (\$5 to \$10 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 95 percent of the total industry shipments are represented by plant: specializing in product classes; 35 percent in finished cotton broadwoven fabrics, except commission finishing; and 60 percent in commission finishing of cotton broadwoven fabrics.

Industry 2261 shipments of cotton broadwoven finished fabric (primary products) in 1972 represented 41 percent (coverage ratio) of these products valued at \$1,151.3 million shipped by all industries. In 1967, the coverage ratio was 58 percent. However, finished cotton fabrics (except commission finishing) made in cotton weaving mills are also primary to industry 2211 which shipped \$337.0 million of this product. The combined coverage ratio, including both industries to which these products are primary, is 60 percent. Other industries shipping cotton broadwoven fabric finishing consisted mainly of industry 2262, Finishing Plants, Manmade Fiber and Silk, (over \$2 million) and industry 2392, Housefurnishings, N.E.C., (\$44.6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2261, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2262.—FINISHING PLANTS, MANMADE FIBER AND SILK (Short Title)

This industry comprises establishments primarily engaged in finishing purchased manmade fiber and silk broadwoven fabrics or finishing such fabrics on a commission basis. These finishing operations include bleaching, dyeing, printing (roller, screen, flock, and plisse), and other mechanical finishing such as preshrinking, calendering, and napping. Establishments primarily engaged in finishing wool broadwoven fabrics are classified in industry 2231; knit goods in SIC group 225; and those coating or impregnating fabrics in industry 2295. For a detailed list of products of industry 2262, refer to table 6A, product codes 22628 20 to 22629 61.

EXPLANATORY TEXT—Continued

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Finishing Plants, Manmade Fiber and Silk, Industry in 1972 totaled \$1,373.1 million. This included shipments of manmade fiber and silk broadwoven finished fabric (primary products) valued at \$1,015.5 million, shipments of other products (secondary products) valued at \$308.2 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$49.4 million.

Shipments of manmade fiber and silk broadwoven finished fabric (primary products) in 1972 represented 77 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 90 percent. Secondary products shipped by this industry in 1972 consisted mainly of cotton broadwoven finished fabric (over \$2 million) and housefurnishings, n.e.c., (\$100 to \$200 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 98 percent of the total industry shipments are represented by plants specializing in product classes: 58 percent in finished manmade fiber and silk broadwoven fabrics, except commission finishing, and 40 percent in commission finishing of manmade fiber and silk broadwoven fabrics.

Industry 2262 shipments of manmade fiber and silk broadwoven finished fabric (primary products) in 1972 represented 57 percent (coverage ratio) of these products valued at \$1,790.7 million shipped by all industries. In 1967, the coverage ratio was 45 percent. However, finished manmade fiber and silk fabrics (except commission finishing) made in manmade fiber fabric weaving mills are also primary to industry 2221 which shipped \$490.6 million of this product. The combined coverage ratio, including both industries to which these products are primary, is 84 percent. Other industries shipping manmade fiber and silk broadwoven finished fabric consisted mainly of industry 2261, Finishing Plants, Cotton, (over \$2 million); and industry 2221, Weaving Mills, Manmade Fiber and Silk (\$40.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed

from industry averages. For industry 2262, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2269.—FINISHING PLANTS, N.E.C. (Short Title)

This industry comprises establishments primarily engaged in dyeing and finishing textiles, not elsewhere classified, such as bleaching, dyeing, printing, and finishing raw stock, yarn, braided goods, and narrow fabrics, except wool and knit fabrics. These establishments perform finishing operations on purchased textiles or on a commission basis. For a detailed list of products of industry 2269, refer to table 6A, product codes 22690 12 to 22690 71.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Finishing Plants, N.E.C., Industry in 1972 totaled \$637.3 million. This included shipments of finished textiles, n.e.c. (primary products) valued at \$432.2 million, shipments of other products (secondary products) valued at \$35.5 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$169.6 million.

Shipments of finished yarn, raw stock, and narrow fabrics, except knit and wool (primary products) in 1972 represented 92 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 84 percent. Secondary products shipped by this industry in 1972 consisted mainly of Weaving and Finishing Mills, Wool, (\$5 to \$10 million).

Industry 2269 shipments of textile finishing, n.e.c., (primary products) in 1972 represented 54 percent (coverage ratio) of these products valued at \$801.9 million shipped by all industries. In 1967, the coverage ratio was 52 percent. However, finished yarns, except wool, made in industry 2281, Yarn Mills, Except Wool, are also primary to that industry. Industry 2281 shipments of finished yarns amounted to \$208.5 million. Therefore, the combined coverage ratio, including both industries to which finished yarns are primary, is 80 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2269, these establishments accounted for 7 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|--|----------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2261 | Industry 2262 | Industry 2269 |
|-----------|---------------|---------------|---------------|
| 1972..... | 181 | 200 | 189 |
| 1967..... | 202 | 212 | 187 |
| 1963..... | 220 | 193 | 174 |

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

TABLE 2. General Statistics by Geographic Area: 1972 and 1967—Continued

(Footnotes for table 2)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other Government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other Government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|-----------|--|--------------------|-------------------|--------------------|------------------------|--------------------------------------|------------------------------------|-----------------------|--------------------------|-------------------------------|
| | | Total | Primary products | Secondary products | Miscellaneous receipts | Primary product specialization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio |
| | | (million dollars) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. B & C (percent) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. F (percent) |
| | | A | B | C | D | E | F | G | H | I |
| 2261 | Finishing plants, cotton.....1972.. | 623.3 | 468.8 | 124.6 | 29.9 | 79 | 1,151.3 | 468.8 | 682.5 | ¹ 41 |
| |1967.. | 893.9 | 635.1 | 215.1 | 43.7 | 75 | 1,087.0 | 635.1 | 451.9 | ¹ 58 |

¹Included in this industry are finished cotton broadwoven fabrics (except commission finishing) which are also primary to industry 2211, Weaving Mills, Cotton. A coverage ratio computed on the basis of including both industries to which finished cotton broadwoven fabrics are primary would total 70 percent. In 1967, the ratio was 90 percent.

²Included in this industry are finished manmade fiber and silk fabrics (except commission finishing) which are also primary to industry 2221, Weaving Mills, Manmade Fiber and Silk. A coverage ratio computed on the basis of including both industries to which finished manmade fiber and silk fabrics are primary would total 84 percent. In 1967, the ratio was 69 percent.

³Included in this industry are finished yarns, except wool, which are also primary to industry 2281, Yarn Mills, Except Wool. A coverage ratio computed on the basis of including both industries to which finished yarns, except wool, are primary would total 80 percent. In 1967, the ratio was 82 percent.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Finishing plants, cotton (SIC 2261) | Finishing plants, manmade fiber (SIC 2262) | Finishing plants, n.e.c. (SIC 2269) | Other industries |

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

| 1972 product code | Product | Unit of measure | Total product shipments including interplant transfers | | | |
|-------------------------|--|--------------------|--|----------------------------|----------|----------------------------|
| | | | 1972 | | 1967 | |
| | | | Quantity | Value (million dollars) | Quantity | Value (million dollars) |
| 22690 -- 2281 pt. | FINISHED YARN, RAW STOCK, AND NARROW FABRICS EXCEPT KNIT AND WOOL (NOT SPUN, THROWN, WOVEN, OR BRAIDED IN SAME ESTABLISHMENT)--Continued | | | | | |
| 22812 61 | Mercerized cotton yarns: | | | | | |
| 22690 32 | Mercerized in plants with spinning facilities..... | ...do..... | 15.4 | 22.0 | 30.0 | 42.3 |
| | Mercerized from purchased yarns..... | ...do..... | | | | |
| 22690 42 | Raw stock, bleached or dyed, except wool..... | | 30.2 | 13.6 | (X) | (6) |
| 22690 61 | Printed plastic film..... | | | | | |
| 22690 71 | Finished braided, or woven narrow fabrics..... | | (X) | 17.4 | (X) | 19.0 |
| 22690 00 | Textile finishing, n.e.c., n.s.k., for companies with 10 employees or more. (See note.)..... | | (X) | 56.5 | (X) | 48.1 |
| 22690 02 | Textile finishing, n.e.c., n.s.k., for companies with less than 10 employees. (See note.)..... | | (X) | 3.5 | (X) | 3.5 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review.

¹Production data for finished broadwoven fabrics with a detailed breakdown by type of fabric are collected on an annual basis and published in Current Industrial Reports, series MA-22S, Broadwoven Fabrics, Finished. Because of reporting differences by individual companies, and some misclassification of fabrics, the data in this report differ from that published in the Current Industrial Report series. The summary figures as published in Current Industrial Reports series MA-22S are shown here, however, for comparative purposes.

| Product | Total production (millions of finished linear yards) | |
|---|---|---------|
| | 1972 Census of Manufactures | MA-22S |
| Finished cotton broadwoven fabrics (bleached, dyed, or printed), total. | 5,398.8 | 5,116.1 |
| Bleached and white finished..... | 2,231.1 | 2,291.9 |
| Plain dyed and finished..... | 2,045.2 | 1,808.1 |
| Printed and finished..... | 1,122.5 | 1,016.1 |
| Finished manmade fiber and silk fabric, total..... | 5,030.9 | 5,040.5 |
| Bleached and white finished..... | 977.7 | 3,764.3 |
| Plain dyed and finished..... | 2,717.5 | |
| Printed and finished..... | 1,335.7 | |

²For fabrics finished on commission, the commission receipts are shown in the value of shipments column.

³Data exclude "finished fabrics not specified by kind."

⁴Includes value of finished fabrics, not specified by kind, and commission receipts, not specified by kind.

⁵Data exclude "other finished fabrics" and "finished fabrics not specified by kind."

⁶For 1967, product codes 22690 42 and 22690 61 are included with product code 22690 00.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

(NA) Not available.

¹Excludes shipments of \$445.4 millions of product class 22117.

²Excludes shipments of \$555.6 millions of product class 22218.

EXPLANATORY TEXT

FLOOR COVERING MILLS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2271—Woven Carpets and Rugs

2272—Tufted Carpets and Rugs

2279—Carpets and Rugs, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2271.—WOVEN CARPETS AND RUGS

This industry comprises establishments primarily engaged in weaving carpets and rugs from any textile yarn. Important products of this industry include Axminster, Wilton, velvet, chenille, and similar woven carpets and rugs; and woven automobile and aircraft floor coverings. For a detailed list of products of industry 2271, refer to table 6A, product codes 22710 01 to 22710 09.

Value of shipments and other receipts of the Woven Carpets and Rugs Industry in 1972 totaled \$212.3 million. This included shipments of woven carpets and rugs (primary products), valued at \$172.7 million, shipments of other products (secondary products) valued at \$21.9 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$17.7 million.

Shipments of woven carpets and rugs (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total product shipments (primary and secondary).

The industry specialization ratio in 1967 was 84 percent. Secondary products shipped by this industry in 1972 consisted mainly of carpets and rugs, n.e.c., and spun yarns.

Shipments of woven carpets and rugs (primary products) from establishments classified in industry 2271 in 1972 represented 85 percent (coverage ratio) of these products valued at \$202.5 million shipped by all industries. In 1967, the coverage ratio was 84 percent. Other carpet industries accounted for the remaining percent of these products.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated) key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages.

For industry 2271, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 2272.—TUFTED CARPETS AND RUGS

This industry comprises establishments primarily engaged in tufting carpets and rugs from any textile fiber. Important products of this industry include tufted carpets, rugs, scatter rugs, and bathmats and bathmat sets except terry woven. Finishers of these products are also included in this industry. For a detailed list of products of industry 2272, refer to table 6A, product codes 22720 01 to 22720 05.

Value of shipments and other receipts of the Tufted Carpets and Rugs Industry in 1972 totaled \$2,782.8 million. This included shipments of tufted carpets and rugs (primary products), valued at \$2,581.3 million, shipments of other products (secondary products) valued at \$74.0 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$127.5 million.

Shipments of tufted carpets and rugs (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 96 percent. Secondary products shipped by this industry in 1972 consisted mainly of woven carpets and rugs (\$29 million) and other carpets and rugs, n.e.c., (\$12 million).

Shipments of tufted carpets and rugs (primary products) from establishments classified in industry 2272 in 1972 represented 98 percent (coverage ratio) of these products valued at \$2,634.1 million shipped by all industries. In 1967, the coverage ratio was 99 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated) key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages.

For industry 2272, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 2279.—CARPETS AND RUGS, N.E.C.

This industry comprises establishments primarily engaged in manufacturing rugs, carpets, art squares, floor mattings, door mats and mattings from twisted paper, grasses, reeds, coir, sisal, jute, or rags. (Establishments primarily engaged in manufacturing hard surface floor coverings, except rubber and cork, are classified in industry 3996). For a detailed list of products of industry 2279, refer to table 6A, product codes 22790 10 to 22790 70.

Value of shipments and other receipts of the Carpets and Rugs, N.E.C., Industry in 1972 totaled \$157.9 million. This included shipments of carpets and rugs, n.e.c., (primary products), valued at \$75.0 million, shipments of other products (secondary products) valued at \$45.6 million, and miscellaneous receipts of \$37.3 million.

Shipments of carpets and rugs, n.e.c., (primary products) in 1972 represented 62 percent (specialization ration) of the industry's total product shipments (primary and secondary). The

industry specialization ratio in 1967 was 83 percent. Secondary products shipped by this industry in 1972 consisted mainly of tufted carpets and rugs and felt goods, except woven felts and mats.

Shipments of carpets and rugs, n.e.c., (primary products) from establishments classified in industry 2279 in 1972 represented 71 percent (coverage ratio) of these products valued at \$105.8 million shipped by all industries. In 1967, the coverage ratio was 69 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated) key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages.

For industry 2279, these establishments accounted for 7 percent of value of shipments.

COMPARISON WITH OTHER CENSUS PUBLICATIONS

Table 6A shows quantity and value of shipments data collected quarterly on the Current Industrial Report series MQ-22Q, Carpets and Rugs, compared with information from the census of manufactures. The difference in the quantity and value of shipments data is due to reporting differences for individual plants furnishing data for both surveys and the exclusion of plants with less than 10 employees from the quarterly mailing panel.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2271 | Industry 2272 | Industry 2279 |
|-----------|------------------|------------------|------------------|
| 1972..... | 64 | 334 | 78 |
| 1967..... | 55 | 210 | 78 |
| 1963..... | 56 | 167 | 103 |

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

TABLE 2. General Statistics by Geographic Area: 1972 and 1967—Continued

Footnotes for table 2

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment—generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

(Not applicable to this report)

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|--------------|------------------------------------|--------------------|-------------------|--------------------|------------------------|--------------------------------------|------------------------------------|-----------------------|--------------------------|------------------|
| | | Total | Primary products | Secondary products | Miscellaneous receipts | Primary product specialization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio |

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Woven carpets and rugs (SIC 2271) | Tufted carpets and rugs (SIC 2272) | Carpets and rugs, n.e.c. (SIC 2279) | Other industries |
|--------------|---|----------------|-----------------------------------|------------------------------------|-------------------------------------|------------------|

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

(X) Not applicable. ^eFrom 10 to 30 percent of this figure was estimated.

¹See text regarding the comparability of the data collected in the census of manufactures and Current Industrial Reports series MQ-22Q.

²The differences in the Census and CIR data are due to the inclusion of products in the census data which are considered to be out of scope of the quarterly survey of approximately \$5 million. In addition, some plants have filed estimates quarterly, whereas more accurate data have been reported in the census. Those plants which are listed as administrative records on table 4 of this report are also excluded from filing reports in the quarterly series.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

(Not applicable to this report)

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

²Data for 1958 have been revised to include the estimated quantity for carpets and rugs, not specified by kind. The value of shipments for such carpets and rugs was \$3,330 thousand.

³Data for 1958 are from the 1958 Census of Manufactures. The 1958 data were not collected on a basis completely comparable with the 1963 information. More detailed 1958 data are shown in the census report for that year. The totals shown for 1958 include \$3,943 thousand for tufted textile carpets, n.e.c., for which a quantity of 1,375 thousand square yards has been estimated based on the unit value relationship reported for other tufted carpets.

EXPLANATORY TEXT

YARN AND THREAD MILLS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2281—Yarn Spinning Mills: Cotton, Manmade Fibers, and Silk*

2282—Yarn Texturizing, Throwing, Twisting, and Winding Mills: Cotton, Manmade Fibers, and Silk*

2283—Yarn Mills, Wool, Including Carpet and Rug Yarn*

2284—Thread Mills

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2281.—YARN MILLS, EXCEPT WOOL (Short Title)

This industry comprises establishments primarily engaged in spinning yarn wholly or chiefly by weight of cotton, manmade fibers, or silk staple. Establishments primarily engaged in dyeing or finishing purchased yarns, or finishing on a commercial basis, are classified in industry 2269. For a detailed list of products of industry 2281, refer to table 6A, product codes 22811 10 to 22814 81.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

*Note that the "short title" for this industry is used throughout the report.

Value of shipments and other receipts of the Yarn Mills, Except Wool, Industry in 1972 totaled \$2,250.6 million. This included shipments of yarn, except wool, (primary products) valued at \$2,006.1 million, shipments of other products (secondary products) valued at \$183.2 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$61.3 million.

Shipments of yarn, except wool, (primary products) in 1972 represented 92 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 95 percent. Secondary products shipped by this industry in 1972 consisted mainly of textured, crimped, or bulked filament yarns (\$58.5 million) and wool yarns (\$42.8 million).

Shipments of yarn, except wool, (primary products) from establishments classified in industry 2281 in 1972 represented 86 percent (coverage ratio) of these products valued at \$2,336.5 million shipped by all industries. In 1967, the coverage ratio was 84 percent. Other industries shipping yarn, except wool, consisted mainly of industry 2211, Weaving Mills, Cotton, (\$61.4 million) and industry 2221, Weaving Mills, Manmade Fiber and Silk, (\$116.1 million).

Cotton, manmade fiber, and silk yarns are defined as primary to industry 2281. Most of these yarns are shipped in the gray, although a portion of such yarns is finished at the spinning mills and sold as finished yarn. These yarns are also defined as primary to this industry. Where such yarns are finished at finishing plants from purchased gray yarn or on commission from yarns owned by others, they are defined as primary to industry 2269, Finishing Plants, N.E.C. The total value of such gray and finished yarns shipped by establishments classified in other than industry 2269 in 1972 amounted to \$2,768.4 million. Shipments from establishments classified in industry 2281 amounted to \$2,006.1 million and represented 72 percent (coverage ratio) of the total of such products shipped. The coverage ratio, computed on the basis of both primary industries (2269 and 2281), was 88 percent.

To the extent that finished yarns are made from gray purchased yarns, the product shipments, by product class and in total, contain some duplication. The amount of such duplication for all spun yarns, except wool, is approximately 8 percent. Approximately 61 percent of finished yarns were made from purchased gray yarns and shipped by establishments classified in industry 2269, Finishing Plants, N.E.C.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at

the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2281, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2282.—THROWING AND WINDING MILLS (Short Title)

This industry comprises establishments primarily engaged in texturizing, throwing, twisting, winding, or spooling yarn wholly or chiefly by weight of cotton, manmade fibers, or silk. Establishments primarily engaged in dyeing or finishing purchased yarns or finishing yarns on a commission basis are classified in industry 2269. For a detailed list of products of industry 2282, refer to table 6A, product codes 22822 11 to 22829 51.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Throwing and Winding Mills Industry in 1972 totaled \$1,427.6 million. This included shipments of textured, thrown, and rewound yarn (primary products) valued at \$1,295.5 million, shipments of other products (secondary products) valued at \$83.1 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$49.0 million.

Shipments of textured, thrown, and rewound yarn (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of organic fibers, noncellulosic (\$20 to \$50 million).

Shipments of textured, thrown, and rewound yarn (primary products) from establishments classified in industry 2282 in 1972 represented 74 percent (coverage ratio) of these products valued at \$1,748.8 million shipped by all industries. Other industries shipping textured, thrown, and rewound yarn consisted mainly of industry 2221, Weaving Mills, Manmade Fiber and Silk, (\$35.7 million) and industry 2824, Organic Fibers, Noncellulosic, (\$312.1 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 97 percent of the total industry shipments are represented by plants specializing in product classes: 83 percent in 22824, textured, crimped and bulked filament yarns; 5 percent in 22823, thrown filament yarns, except textured; and 9 percent in 22822, rewound,

plied, etc., yarns other than wool (not spun or thrown at same establishments).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2282, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2283.—WOOL YARN MILLS (Short Title)

This industry comprises establishments primarily engaged in spinning, twisting, winding, or spooling yarn (including carpet and rug yarn) wholly or chiefly by weight of wool, mohair, or similar animal fibers. Establishments primarily engaged in dyeing or finishing purchased wool yarn or finishing wool yarn on a commission basis are classified in industry 2231. For a detailed list of products of industry 2283, refer to table 6A, product codes 22831 00 to 22832 00.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Wool Yarn Mills Industry in 1972 totaled \$225.1 million. This included shipments of wool yarn (primary products) valued at \$152.6 million, shipments of other products (secondary products) valued at \$59.2 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$13.3 million.

Shipments of wool yarn (primary products) in 1972 represented 72 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 79 percent. Secondary products shipped by this industry in 1972 consisted mainly of yarn except wool (\$27.6 million).

Shipments of wool yarn (primary products) from establishments classified in industry 2283 in 1972 represented 69 percent (coverage ratio) of these products valued at \$222.7 million shipped by all industries. In 1967, the coverage ratio was 80 percent. Other industries shipping wool yarn consisted mainly of industry 2231, Weaving and Finishing Mills, Wool, (\$9.7 million) and industry 2271, Woven Carpets and Rugs, (\$4.4 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 87 percent of the total

industry shipments are represented by plants specializing in product classes: 57 percent in 22831, wool yarns, except carpet, including yarns finished at the same establishment; and 30 percent in 22832, wool yarns, carpet.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2283, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2284.—THREAD MILLS

This industry comprises establishments primarily engaged in manufacturing thread from natural or manmade fiber except flax (industry 2299) and wool (industry 2283). Important products of this industry include sewing, darning, embroidery, tatting, hand knitting, and other handicraft threads. For a detailed list of products of industry 2284, refer to table 6A, product codes 22841 21 to 22843 11.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Thread Mills Industry in 1972 totaled \$345.4 million. This included shipments of thread (primary products) valued at \$307.8 million, shipments of other products (secondary products) valued at \$26.6 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$11.0 million.

Shipments of thread (primary products) in 1972 represented 92 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 90 percent. Secondary products shipped by this industry in 1972 consisted mainly of yarn, except wool (over \$2 million).

Shipments of thread (primary products) from establishments classified in industry 2284 in 1972 represented 90 percent (coverage ratio) of these products valued at \$340.3 million shipped by all industries. In 1967, the coverage ratio was also 90 percent. Other industries shipping thread consisted mainly of industry 2211, Weaving Mills, Cotton, (\$5 to \$10 million) and industry 2269, Finishing Plants, N.E.C. (\$2 to \$5 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 98 percent of the total industry shipments are represented by plants specializing in product classes: 71 percent in 22842, finished thread for industrial or manufacturers' use; 16 percent in 22841, finished thread for use in the home; and 11 percent in 22843, unfinished thread.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2284, these establishments accounted for 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |

TABLE 1A. General Statistics: 1958 to 1972—Continued

(Footnotes for table 1A)

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2281 | Industry 2282 | Industry 2283 | Industry 2284 |
|-----------|------------------|------------------|------------------|------------------|
| 1972..... | 264 | 177 | 92 | 61 |
| 1967..... | 256 | 159 | 127 | 63 |
| 1963..... | 234 | 165 | 136 | 59 |

(NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²See footnote 4, table 6A, for information regarding the 1967 coverage ratio.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

TABLE 3. Detailed Statistics: 1972

(See appendix, Explanation of Terms)

| Item | Yarn mills, except wool (SIC 2281) | Throwing and winding mills (SIC 2282) | | | Wool yarn mills (SIC 2283) | Thread mills (SIC 2284) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|--------------|---------------------------------------|----------------------|----------------------|-----------------------|--------------------------------|--|-------------------------------------|-----------------------------|--------------------------------|-------------------------------|
| | | Total | Primary products | Secondary products | Miscel- laneous receipts | Primary product special- ization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio |
| | | (million dollars) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. B & C (percent) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. F (percent) |
| | | A | B | C | D | E | F | G | H | I |

| |1967.. | 256.6 | 223.3 | 24.2 | 9.1 | 90 | 248.1 | 223.3 | 24.8 | 90 |

¹Excludes shipments of \$431.8 million from establishments classified in industry 2269, Finishing Plants, N.E.C. A coverage ratio computed on the basis of including both industries to which yarns (gray and finished) are primary would total 88 percent: 72 percent by industry 2281 and 16 percent by industry 2269. The remaining 12 percent was shipped by establishments in other industries.

²Excludes shipments of \$141.1 million from establishments classified in industry 2269, Finishing Plants, N.E.C. A coverage ratio computed on the basis of including both industries to which yarns (gray and finished) are primary would total 85 percent: 77 percent by industry 2281 and 8 percent by industry 2269. The remaining 15 percent was shipped by establishments in other industries.

³See footnote 4, table 6A, for information regarding the 1967 coverage ratio.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| 22840 00 | Thread, n.s.k., for companies with 10 employees or more. (see note.). | | (X) | (X) | 2.9 | (X) | (X) | 1.6 | | | | | |
| 22840 02 | Thread, n.s.k., for companies with less than 10 employees. (See note.)..... | | (X) | (X) | 2.3 | (X) | (X) | 1.5 | | | | | |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

¹Production of spun yarns by knitting and narrow fabric weaving mills is excluded for both 1972 and 1967. Such production is included in the annual data published in Current Industrial Reports, series MA-22F, Yarn Production. This report also includes detailed data by fiber, and use, and method of distribution. The MA-22F data differ from the census figures shown above because of the exclusion from the census of manufactures data of the output of knitting and narrow fabric mills, reporting differences for mills reporting in both surveys, some conceptual differences between the two surveys, and the omission of several plants from the annual yarn survey. The summary figures for 1972 as published in the Current Industrial Reports series MA-22F are shown below for comparative purposes.

| Code | Product | Production as reported on Census Annual Form MA-22F (1,000 pounds) | | | |
|-------|---|---|----------|-------------|---------------|
| | | Total | For sale | For own use | On commission |
| 22811 | Carded cotton yarns..... | 3,344.7 | (c) | 2,504.1 | (a) |
| 22812 | Combed cotton yarns..... | | | | |
| 22813 | Rayon and/or acetate..... | | 162.5 | 314.1 | 3.2 |
| 22814 | Other spun manmade fiber yarns..... | 2,046.6 | 643.9 | 1,374.7 | 28.0 |
| 2283- | Wool, reused and reprocessed wool, total..... | 256.6 | 71.9 | 168.1 | 16.6 |
| 22831 | Wool yarns, except carpet yarns..... | 182.4 | (c) | (c) | (c) |
| 22832 | Wool carpet (weaving and tufting) yarns..... | 74.2 | (c) | (c) | (b) |

Note: In order to avoid disclosure of individual company information, the approximate magnitude of the withheld information is as follows: (a) Under 500 thousand pounds; (b) 500 thousand to 999 thousand pounds; and (c) 2,500 thousand pounds and over.

- Represents zero. (X) Not applicable. (NA) Not available.

²To the extent that finished yarns are made from purchased yarns (code 2269- --), the industry and product class totals contain some duplications.

³Carded yarns bleached or mercerized from purchased yarns are included with the data for combed yarns.

⁴For 1967, data for textured yarn exclude production and shipments by establishments producing filament yarn and classified in industries 2823, Cellulosic Manmade Fibers, and 2824, Organic Fibers, Noncellulosic. Due to the exclusion of these data, it is not possible to calculate a coverage ratio for 1967. Total production for this item as published in Current Industrial Reports, series MA-22F, in 1967 was 420,468 thousand pounds. This Current Industrial Report also furnishes more detailed data for this product.

⁵For yarns thrown on commission, the figures represent commission receipts rather than the value of the yarns thrown.

⁶For 1972, separate quantity data were requested for each of these products in 12,000 yard units; however, due to an inadequate response rate, the quantity figures cannot be shown.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

(NA) Not available.

- Represents zero. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²Excludes finished purchased yarns which are included in industry 2269, Finishing Plants, N.E.C.

³The 1958 data for total shipments include estimated data for yarns spun on the woolen and worsted systems.

⁴For 1958, all finished noncellulosic yarns are included with finished rayon and/or acetate yarns.

⁵Quantity estimated based on the quantity-value relationship reported for other yarns.

⁶For 1958, separate data were collected for weaving, machine knitting, and hand-knitting yarns, by type of spinning system. The value of shipments for yarns not specified by kind was \$5.8 million. The quantity data have been revised to include an estimated quantity for this item.

EXPLANATORY TEXT

MISCELLANEOUS TEXTILE GOODS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2291—Felt Goods, Except Woven Felts and Hats
- 2292—Lace Goods
- 2293—Paddings and Upholstery Filling
- 2294—Processed Waste and Recovered Fibers and Flock*
- 2295—Coated Fabrics, Not Rubberized
- 2296—Tire Cord and Fabric
- 2297—Nonwoven Fabrics
- 2298—Cordage and Twine
- 2299—Textile Goods, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2291.—FELT GOODS, EXCEPT WOVEN FELTS AND HATS

This industry comprises establishments primarily engaged in manufacturing pressed felt, regardless of fiber, by means of heat, moisture, and pressure; and those making punched felt for rugs, cushions and other products from hair, jute, wool, or other fibers by the needle loom process.

Establishments primarily engaged in manufacturing woven wool felts and wool haircloth are classified in industry 2231, and those manufacturing felt hats in SIC Group 235. For a

*Note that the "short title" for this industry is used throughout the report.

detailed list of products of industry 2291, refer to table 6A, product codes 22910 11 to 22910 49.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Felt Goods, Except Woven Felts and Hats Industry in 1972 totaled \$146.5 million. This included shipments of felt goods, except woven felts and hats, (primary products) valued \$107.5 million, shipments of other products (secondary products) valued at \$32.4 million, and miscellaneous receipts (mainly resales) of \$6.6 million.

Shipments of felt goods, except woven felts and hats, (primary products) in 1972 represented 77 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 76 percent. Secondary products shipped by this industry in 1972 consisted mainly of nonwoven fabrics and fabricated textile products, n.e.c., (\$5 to \$10 million each).

Shipments of felt goods, except woven felts and hats, (primary products) from establishments classified in industry 2291 in 1972 represented 82 percent (coverage ratio) of these products valued at \$130.8 million shipped by all industries. In 1967, the coverage ratio was 72 percent. Other industries shipping felt goods, except woven felts and hats, consisted mainly of industry 2279, Carpets and Rugs, N.E.C., (\$10 to \$20 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2291, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2292.—LACE GOODS

This industry comprises establishments primarily engaged in manufacturing lace machine products and those primarily engaged in dyeing and finishing lace goods.

Establishments primarily engaged in manufacturing Schiffli machine embroideries are classified in industry 2397. Establishments primarily engaged in manufacturing knitted lace and netting are classified in industry 2257 or 2258. For a detailed list of products of industry 2292, refer to table 6A, product codes 22920 11 to 22920 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Lace Goods Industry in 1972 totaled \$47.1 million. This included shipments of lace goods (primary products) valued at \$35.4 million, shipments of other products (secondary products) valued at \$2.7 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$9.0 million.

Shipments of lace goods (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 99 percent.

Shipments of lace goods (primary products) from establishments classified in industry 2292 in 1972 represented 89 percent (coverage ratio) of these products valued at \$39.8 million shipped by all industries. In 1967, the coverage ratio was 94 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2292, these establishments accounted for 20 percent of value of shipments.

INDUSTRY 2293.—PADDINGS AND UPHOLSTERY FILLING

This industry comprises establishments primarily engaged in manufacturing batting, padding, wadding, and filling for upholstery, pillows, quilts, and apparel from curled hair, cotton-mill waste, moss, hemp tow, flax tow, kapok, and related materials.

Establishments primarily engaged in manufacturing wood excelsior pads and wrappers are classified in industry 2429. For a detailed list of products of industry 2293, refer to table 6A, product codes 22930 13 to 22930 59.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Paddings and Upholstery Filling Industry in 1972 totaled \$134.6 million. This included shipments of paddings and upholstery filling (primary products) valued at \$112.9 million, shipments of other products (secondary products) valued at \$18.4 million, and miscellaneous receipts (mainly resales) of \$3.3 million.

Shipments of paddings and upholstery filling (primary products) in 1972 represented 86 percent (specialization ratio)

of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 86 percent. Secondary products shipped by this industry in 1972 consisted mainly of nonwoven fabrics (\$6.3 million).

Shipments of paddings and upholstery filling (primary products) from establishments classified in industry 2293 in 1972 represented 73 percent (coverage ratio) of these products valued at \$154.3 million shipped by all industries. In 1967, the coverage ratio was 82 percent. Other industries shipping paddings and upholstery filling consisted mainly of industry 2297, Nonwoven Fabrics and Related Products, (\$8.5 million) and industry 3296, Mineral Wool, (\$10 to \$20 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2293, these establishments accounted for 18 percent of value of shipments.

INDUSTRY 2294.—PROCESSED TEXTILE WASTE (Short Title)

This industry comprises establishments primarily engaged in processing textile mill waste for spinning, padding, batting, or other uses; in recovering textile fibers from clippings and rags; in cutting flock from waste, recovered fibers, or new fiber stock; and in manufacturing oakum and twisted jute packing.

Establishments primarily engaged in cleaning and sorting wiping rags or waste are classified in industry 5093. For a detailed list of products of industry 2294, refer to table 6A, product codes 22940 12 to 22940 51.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Processed Textile Waste Industry in 1972 totaled \$133.8 million. This included shipments of processed textile waste (primary products) valued at \$113.7 million, shipments of other products (secondary products) valued at \$0.4 million, and miscellaneous receipts (mainly resales) of \$19.7 million.

Shipments of processed textile waste (primary products) in 1972 represented 100 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 96 percent.

Shipments of processed textile waste (primary products) from establishments classified in industry 2294 in 1972 represented 92 percent (coverage ratio) of these products valued at

\$124.2 million shipped by all industries. In 1967, the coverage ratio was also 92 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2294, these establishments accounted for 8 percent of value of shipments.

INDUSTRY 2295.—COATED FABRICS, NOT RUBBERIZED

This industry comprises establishments primarily engaged in manufacturing coated and impregnated textiles, and in the special finishing of textiles, such as varnishing and waxing.

Establishments primarily engaged in rubberizing purchased fabrics are classified in industry 3069, and those primarily engaged in dyeing and finishing textiles, in SIC Group 226. For a detailed list of products of industry 2295, refer to table 6A, product codes 22951 11 to 22953 15.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Coated Fabrics, Not Rubberized, Industry in 1972 totaled \$858.9 million. This included shipments of coated fabrics, not rubberized, (primary products) valued at \$707.3 million, shipments of other products (secondary products) valued at \$95.8 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$55.8 million.

Shipments of coated fabrics, not rubberized, (primary products) in 1972 represented 87 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 87 percent. Secondary products shipped by this industry in 1972 consisted mainly of miscellaneous plastics products (\$35.2 million), automotive and apparel trimmings and fabricated rubber products, n.e.c., (\$10 to \$20 million each).

Shipments of coated fabrics, not rubberized, (primary products) from establishments classified in industry 2295 in 1972 represented 87 percent (coverage ratio) of these products valued at \$808.6 million shipped by all industries. In 1967, the coverage ratio was 89 percent. Other industries shipping coated fabrics, not rubberized, consisted mainly of industry 3069, Fabricated Rubber Products, N.E.C., (\$28.5 million); industry 3079, Miscellaneous Plastics Products, (\$22.9 million); and industry 2591, Drapery Hardware and Blinds and Shades, (\$10 to \$20 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2295, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 2296.—TIRE CORD AND FABRIC

This industry comprises establishments primarily engaged in manufacturing cord and fabric for use in reinforcing rubber tires, industrial belting, fuel cells, and similar uses. For a detailed list of products of industry 2296, refer to table 6A, product codes 22960 13 to 22960 39.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Tire Cord and Fabric Industry in 1972 totaled \$685.1 million. This included shipments of tire cord and fabric (primary products) valued at \$600.7 million, shipments of other products (secondary products) valued at \$62.6 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$21.8 million.

Shipments of tire cord and fabric (primary products) in 1972 represented 91 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 84 percent. Secondary products shipped by this industry in 1972 consisted mainly of yarn mills, except wool, (\$25.6 million) and weaving mills, synthetics, (\$19.3 million).

Shipments of tire cord and fabric (primary products) from establishments classified in industry 2296 in 1972 represented 97 percent (coverage ratio) of these products valued at \$620.8 million shipped by all industries. In 1967, the coverage ratio was 90 percent. Other industries shipping tire cord and fabric consisted mainly of industry 2211, Weaving Mills, Cotton, and industry 2221, Weaving Mills, Manmade Fiber and Silk, (\$5 to \$10 million each).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2296, these establishments accounted for 0 percent of value of shipments.

INDUSTRY 2297.—NONWOVEN FABRICS

This industry comprises establishments primarily engaged in manufacturing nonwoven fabrics (by bonding and/or interlocking of fibers) by mechanical, chemical, thermal, or solvent means or by combinations thereof. This industry also includes establishments primarily engaged in manufacturing nonwoven fabricated products such as blankets, ribbons, and wipers.

Establishments primarily engaged in manufacturing surgical supplies, bandages, surgical gauze and dressings, etc., are classified in industry 3842. Also, establishments primarily engaged in manufacturing, from purchased paper, sanitary paper products, such as facial tissues and handkerchiefs, table napkins, toilet paper, towels, disposable diapers, and sanitary napkins and tampons are classified in industry 2647. Establishments primarily engaged in producing fabrics by the wool felting process are classified in other industries of SIC Group 229. For a detailed list of products of industry 2297, refer to table 6A, product codes 22971 21 to 22972 98.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. In 1967, industry 2297 was titled Scouring and Combing Mill Products. This is now product class 22993 in industry 2299, Textile Goods, N.E.C. In 1967, nonwoven textiles was product class 22991 in industry 2299.

The effect of the revisions on the data are summarized in table 1C. "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 82 establishments with 10.4 thousand total employment and \$189.6 million value added would have been classified in different industries under the old SIC.

Value of shipments and other receipts of the Nonwoven Fabrics Industry in 1972 totaled \$393.2 million. This included shipments of nonwoven fabrics (primary products) valued at \$315.5 million, shipments of other products (secondary products) valued at \$59.3 million, and miscellaneous receipts (mainly resales) of \$18.4 million.

Shipments of nonwoven fabrics (primary products) in 1972 represented 84 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of sanitary paper products (\$10 to \$20 million), paddings and upholstery filling (\$8.5 million), and finishing plants, cotton (\$5 to \$10 million)

Shipments of nonwoven fabrics (primary products) from establishments classified in industry 2297 in 1972 represented 61 percent (coverage ratio) of these products valued at \$517.6 million shipped by all industries. Other industries shipping nonwoven fabrics consisted mainly of industry 2824, Organic Fibers, Noncellulosic, (\$50 to \$100 million); industry 2221,

Weaving Mills, Manmade Fiber and Silk, and industry 2621, Papermills, Except Building Paper, (\$20 to \$50 million each).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2297, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2298.—CORDAGE AND TWINE

This industry comprises establishments primarily engaged in manufacturing rope, cable, cordage, twine, and related products from abaca (Manila), sisal, henequen, hemp, cotton, paper, jute, flax, manmade fibers including glass, and other fibers. For a detailed list of products of industry 2298, refer to table 6A, product codes 22981 11 to 22983 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Cordage and Twine Industry in 1972 totaled \$191.0 million. This included shipments of cordage and twine (primary products) valued at \$160.4 million, shipments of other products (secondary products) valued at \$26.1 million, and miscellaneous receipts (mainly resales) of \$4.5 million.

Shipments of cordage and twine (primary products) in 1972 represented 86 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 86 percent. Secondary products shipped by this industry in 1972 consisted mainly of nonwoven fabrics (\$5 to \$10 million).

Shipments of cordage and twine (primary products) from establishments classified in industry 2298 in 1972 represented 92 percent (coverage ratio) of these products valued at \$174.7 million shipped by all industries. In 1967, the coverage ratio was 88 percent. Other industries shipping cordage and twine consisted mainly of industry 2821, Plastics Materials and Resins, industry 3949, Sporting and Athletic Goods, N.E.C., and industry 3999, Manufacturing Industries, N.E.C., (\$2 to \$5 million each).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed

from industry averages. For industry 2298, these establishments accounted for 7 percent of value of shipments.

INDUSTRY 2299.—TEXTILE GOODS, N.E.C.

This industry comprises establishments primarily engaged in manufacturing linen goods, jute goods, except felt, and other textile goods, not elsewhere classified. The industry also includes establishments primarily engaged in processing textile fibers to prepare them for spinning.

Establishments primarily engaged in manufacturing woven felts are classified in industry 2231 (Weaving and Finishing Mills, Wool), nonwoven felts in industry 2291, and cordage and twine in industry 2298. For a detailed list of products of industry 2299, refer to table 6A, product codes 22992 61 to 22993 77.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. In 1967, industry 2297 was titled Scouring and Combing Mill Products. This is now product class 22993 in industry 2299, Textile Goods, N.E.C. In 1967, nonwoven textiles was product class 22991 in industry 2299.

The effect of the revisions on the data are summarized in table 1C, "Composition of the New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, 47 establishments with

3.4 thousand total employment and \$39.0 million value added would have been classified in different industries under the old SIC.

Value of shipments and other receipts of the Textile Goods, N.E.C., Industry in 1972 totaled \$211.8 million. This included shipments of textile goods, n.e.c., (primary products) valued at \$164.7 million, shipments of other products (secondary products) valued at \$4.8 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$42.3 million.

Shipments of textile goods, n.e.c., (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary).

Shipments of textile goods, n.e.c., (primary products) from establishments classified in industry 2299 in 1972 represented 77 percent (coverage ratio) of these products valued at \$214.4 million shipped by all industries. Other industries shipping textile goods, n.e.c., consisted mainly of industry 2257, Circular Knit Fabric Mills, (\$20 to \$50 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2299, these establishments accounted for 38 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|---|----------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | | | | |

TABLE 1A. General Statistics: 1958 to 1972—Continued

(Footnotes for table 1A)

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2291 | Industry 2292 | Industry 2293 | Industry 2294 | Industry 2295 | Industry 2296 | Industry 2297 | Industry 2298 | Industry 2299 |
|-----------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|
| 1972..... | 38 | 99 | 119 | 102 | 184 | 9 | 66 | 134 | 338 |
| 1967..... | 33 | 134 | 133 | 134 | 157 | 12 | (NA) | 147 | (NA) |
| 1963..... | 28 | 145 | 168 | 137 | 149 | 12 | (NA) | 148 | (NA) |

(NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²The total establishment count should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 employees or more are far more reliable than the total number of establishments. The classification of establishments is further discussed in appendix A of this publication.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

| Industry | Composition of new industry | | | | | Totals for industries on old SIC | | | | |
|--|-----------------------------|---------------------------|---------------|----------------------------|--------------------|----------------------------------|---------------------------|---------------|----------------------------|--------------------|
| | Establishments | | All employees | Value added by manufacture | Value of shipments | Establishments | | All employees | Value added by manufacture | Value of shipments |

TABLE 2. General Statistics by Geographic Area: 1972 and 1967—Continued

(Footnotes for table 2)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available.

(D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars).

¹The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

²The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

TABLE 4. General Statistics, by Employment Size of Establishment: 1972

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other Government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|--------------|---|----------------------|----------------------|-----------------------|--------------------------------|--|-------------------------------------|-----------------------------|--------------------------------|-------------------------------|

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 5A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

| 1972 product code | Product | 1972 total production (million pounds) | Total product shipments including interplant transfers | | | |
|-------------------------|--|---|--|----------------------------|------------------------------|----------------------------|
| | | | 1972 | | 1967 | |
| | | | Quantity (million pounds) | Value (million dollars) | Quantity (million pounds) | Value (million dollars) |
| 2299- -- | TEXTILE GOODS, N.E.C..... | (X) | (X) | 214.4 | (X) | 136.5 |
| 22992 -- | Jute Goods, (Except Jute Felts, Cordage or Twine) and Linen Goods, total..... | (X) | (X) | 21.0 | (X) | 29.9 |
| 22992 61 | Jute yarn, bagging and all other jute woven goods, except felts. | (X) | (X) | 13.1 | (X) | 14.4 |
| 22992 75 | Linen thread, fabric and other linen goods..... | (X) | (X) | 7.0 | (X) | 12.3 |
| 22992 00 | Other textile goods, n.e.c., including jute or linen goods, n.s.k..... | (X) | (X) | .9 | (X) | 3.2 |
| 22993 -- | Scouring and Combing Mill Products: | | | | | |
| 22993 17 | Scoured wool..... | (X) | 6.6 | 6.6 | 6.9 | 6.6 |
| 22993 40 | Tops and noils, including top and sliver converted from tow without combing ¹⁷ | (S) | 38.3 | 50.4 | 50.4 | 74.7 |
| 22993 77 | Other scouring and combing mill products, including nubs, slubs, etc..... | 10.6 | 3.1 | 3.0 | 12.5 | 3.9 |
| 22990 98 | Other textile goods, n.e.c..... | (X) | (X) | 36.5 | (X) | 15.9 |
| 22990 00 | Textile goods, n.e.c., n.s.k., for companies with 10 employees or more. (See note.)..... | (X) | (X) | ¹⁸ 70.5 | (X) | ¹⁹ 4.4 |
| 22990 02 | Textile goods, n.e.c., n.s.k., for companies with less than 10 employees. (See note.)..... | (X) | (X) | ¹⁸ 26.4 | (X) | ¹⁹ 1.1 |
| 22994 93 | Receipts for commission scouring, combing and related processing of materials owned by others..... | (X) | (X) | ²⁰ 27.1 | (X) | ²⁰ 29.9 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4-digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review.

¹Separate data were requested for each of the products listed under pressed wool felts. However, since a number of producers did not report quantity data, these figures have been withheld.

²From 10 to 30 percent of this figure was estimated.

³Quantity data estimated or partially estimated based on the unit value relationship reported for other products.

⁴The 1967 data for these items are included with the heavyweight fabrics, over 16 ounces per square yard.

⁵Over 30 percent of this figure was estimated.

⁶For 1967, data for polyurethane-coated fabrics were not collected separately.

⁷Production data for tire cord and tire cord fabric are published quarterly by the Bureau of the Census in Current Industrial Reports, series MQ-22T.4, "Tire Cord and Tire Cord Fabric." The difference between these figures is the result of reporting differences for individual plants furnishing data in both surveys.

⁸Nonwoven fabrics are defined as those fabrics of a textile structure produced by bonding or interlocking of fibers, or both, accomplished by mechanical, chemical, or solvent means and combinations thereof. They can be further defined as a textile structure consisting of a web or mat of fibers held together with a bonding material. Excluded from this category are paper, woven, knitted, or tufted fabrics; and pressed, punched, or woven felts.

⁹Includes some duplication since some nonwoven ribbons and related nonwoven products are made from purchased nonwoven fabrics.

¹⁰The 1967 unit of measure was millions of pounds, whereas 1972 unit of measure is square yards.

¹¹Data for nonwoven fabrics are published annually by the Bureau of the Census in Current Industrial Reports, series MA-22H, "Nonwoven Fabrics." The difference between these figures is the result of reporting differences for individual plants furnishing data in both surveys.

¹²Disposable diapers made of nonwoven fabrics and/or combinations thereof are included in product code 23990 27; and disposable diapers made of paper, except diaper liners, are included in product code 26472 87. Disposable surgical drapes, including O/B and O/R packs and disposable incontinent pads, bed pads, and adult diapers are included in product codes 38421 31 and 38421 32, respectively.

¹³These data were not collected separately in 1967. For 1967, data for these products were probably included in product code 23990 00, "Other fabricated textile products, n.e.c."

¹⁴These data were estimated for comparative purposes, as separate information for the two industries (2297 and 2299) are not available.

¹⁵Figures combined to avoid disclosing operations of individual companies.

¹⁶In 1967, this item was included in product code 22983 98, "All other cotton cordage."

¹⁷Data for the production of tops and noils, including top and sliver converted from tow without combing, are published monthly by the Bureau of the Census in Current Industrial Reports, series M22D, "Consumption on the Woolen and Worsted Systems."

¹⁸For 1972, these data include a large number of firms that were classified only as textile type activities in Major Group 22. The information to correctly classify these plants into their appropriate 4-digit code is not available.

¹⁹The information, as tabulated in old SIC codes 2297 and 2299 for 1967, was prorated into the two new industries based on value of shipments.

²⁰Commission receipts are included in the total shown above for SIC 2299, Textile Goods, N.E.C.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9,
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

(NA) Not available.

TABLE 6C. Product Classes—Value Shipped by All Manufacturing Establishments:
1958, 1963, 1967 to 1972

(In millions of dollars)

Note: Industries 2297 and 2299 are on new SIC basis for 1972.

(X) Not applicable. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

²For 1958, data for nonwoven fabrics are included with product class 22990. This combination was made because the data were unsatisfactorily reported due to problems associated with the product definitions.

| 976000 | Materials, containers, supplies, n.s.k..... | | (X) | 15.1 | (X) | 6.8 |

(X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. ^eFrom 10 to 30 percent of this figure was estimated.

¹This item represents the total cost of materials for establishments that did not report detailed materials data.

²For 1967 and prior years, these data were included in code 970099, "All other materials, containers, and supplies consumed." Data on glass filament yarn and roving were collected separately for the first time in 1972.

Note: In 1967, data for manufactured mixed gas, blast furnace gas, and coke oven gas were included in code 131300, natural gas. In 1971, data for these gases were included in code 960011, other fuels.

- Represents zero. (X) Not applicable. (S) Withheld because the data did not meet publication standards. (Z) Less than half of the unit of measurement shown.

MAJOR GROUP 23

Apparel and Other Textile Products

- 23A Men's and boys' apparel
- 23B Women's and misses' outerwear
- 23C Women's and children's underwear; headwear;
children's outerwear
- 23D Miscellaneous apparel and accessories
- 23E Miscellaneous fabricated textile products

This major group, known as the cutting-up and needle trades, includes establishments producing clothing and fabricating products by cutting and sewing purchased woven or knit textile fabrics and related materials such as leather, rubberized fabrics, plastics, and furs.

Included in the apparel industries are three types of establishments: (1) The "regular" or inside factories, (2) contract factories, and (3) apparel jobbers. The regular factories perform all of the usual manufacturing functions within their own plant; the contract factories manufacture apparel from materials owned by others; and apparel jobbers perform the entrepreneurial functions of a manufacturing company, such as buying raw materials, designing and preparing samples, arranging for the manufacture of the garments from their materials, and selling of the finished apparel.

Custom tailors and dressmakers not operating on a factory basis are classified in industry 5699, Miscellaneous Apparel and Accessories; establishments which purchase and resell finished garments but do not perform the functions of the apparel jobbers are classified in group 513.

TABLE 1. General Statistics: 1972 and Earlier Years

(See appendix, Explanation of Terms)

| Year and item | Establishments | | All employees ¹ | | Production workers | | | Value added by manufacture ² | Cost of materials ³ | Value of industry shipments ³ | Capital expenditures, new ⁴ |

(X) Not applicable. (NA) Not available.

¹The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

²For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. For industries reporting the value of production, the adjustment for the change in finished products inventories was not made. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. For 1921 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See "Value Added by Manufacture" in Introduction.

³The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

⁴The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.

⁵See appendix C of the General Summary for the 1972 changes in the Standard Industrial Classification.

⁶Similar data for administrative and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these establishments are not available for the years 1955 to 1957, 1959 to 1962, or prior to 1949.

⁷The 1958 to 1972 data are not completely comparable to data shown for prior years. In 1957 and prior years, establishments producing hats, except cloth and millinery, were included in Major Group 22, Textile Mill Products. In 1958 they are included in Major Group 23. In 1954 these plants had 12,988 employees and value added by manufacture of \$61,886 thousand. In addition, establishments primarily engaged in shrinking and sponging of cloth are classified in Major Group 22 for 1958, but were included in Major Group 23 for 1957 and prior years. Such establishments in 1958 had 1,723 employees and \$10,709 thousand value added by manufacture.

⁸These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

⁹The figures for all years except 1939 and 1937 include data for establishments that cut and stitch products from knit cloth made in separate mills of integrated companies. The 1939 and 1937 data for these establishments are included in the figures for the textile mill products industries.

TABLE 2. General Statistics by Geographic Area: 1972 and 1967

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

²The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

EXPLANATORY TEXT

MEN'S AND BOYS' APPAREL

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2311.—Men's, Youths', and Boys' Suits, Coats, and Overcoats*
- 2321.—Men's, Youths', and Boys' Shirts (Except Work Shirts) and Nightwear*
- 2322.—Men's, Youths' and Boys' Underwear*
- 2323.—Men's, Youths', and Boys' Neckwear*
- 2327.—Men's, Youths', and Boys' Separate Trousers*
- 2328.—Men's, Youths', and Boys' Work Clothing*
- 2329.—Men's, Youths', and Boys' Clothing, N.E.C.*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of products of the industry shipped as secondary products by establishments classified in other industries.

Patterns of Operation.—The apparel industries are characterized by three major types of establishment operation: (1) Regular or inside factories, known as "manufacturers," (2) apparel "jobbers," and (3) outside or contract factories, the "contractors."

The "manufacturer" purchases fabric, employs production workers in his own plant to cut and sew garments, and sells the finished products; in effect, this establishment type performs all of the usual manufacturing functions within his own establishment.

The apparel "jobber" primarily performs only the entrepreneurial functions of the manufacturing concern, such as

*Note that the "short title" for this industry is used throughout the report.

buying raw materials, designing and preparing samples, arranging with outside factories (contractors) for the manufacture of his garments from his own materials, and marketing the finished product. A number of jobbers, however, do maintain the cutting operation within their own establishments; only the final actual processing (cutting, sewing, finishing, etc.) is done on contract in an outside factory.

The apparel "contractor" employs production workers in his own establishment to process materials owned by others, makes products to specification, and does not become involved in the sale of the finished garment.

Methods of Reporting on Census Questionnaires.—Typically, the apparel manufacturer reports figures on employment (including production workers), cost of piece goods and other raw materials, and the value of products made by him from his own materials. The apparel jobber will show, in addition to his cost of raw materials, a cost for contract work and the value of products made for him from his own materials. The typical apparel jobber's questionnaire shows few, if any, production workers, and his labor costs are represented in his "cost of contract work." The contractor, on the other hand, reports figures on employment (primary production workers). Instead of showing the value of the garments which he produced (which would duplicate the data reported by his principals), the contractor reports his receipts for the contract work done for jobbers on their materials. His materials costs and contract receipts do not include any costs for materials which he has processed but did not own.

Classification of Establishments.—Since these different methods of operation lead to significant differences in the various relationships between wages and salaries paid, cost of materials, value of products, and value added by manufacture, plants were classified by their primary method of operation; i.e., "manufacturer," "jobber," or "contractor." Wherever possible, separate statistics for each group are shown in tables 2 to 4.

It should be noted, however, that many establishments in these industries employ more than one method of operating. For example, some establishments act as both manufacturer and jobber, or as manufacturer and contractor. In assigning the primary method of operation for manufacturer-jobber plants, the relationship between wages and salaries paid to the cost of contract work was the determining factor. If wage and salary payments exceeded contract payments, the plant was classified as a "manufacturer;" if the contract payments exceeded the wage and salary payments, the plant was classified as a "jobber." Similarly, for manufacturer-contractor plants, the

relationship between the value of products made for their own account was compared with the receipts for work done on materials owned by other establishments to determine the plant's primary method of operation.

A number of multiplant companies cut and sew apparel in separate plants. In these cases, the sewing plants were treated as "contractors" to the cutting establishments. Such contract plants were requested to report their value of work done as "contract receipts for work done for others;" the cutting establishment reported the value of production of the finished garment and included the cost of the work done by the sewing plant in the "cost of contract work." This procedure somewhat inflates the amount of contract payments and receipts as they are usually described in the trade, where contractors are usually thought of as independently owned establishments.

INDUSTRY 2311.—MEN'S AND BOYS' SUITS AND COATS (Short Title)

This industry comprises establishments primarily engaged in the manufacture of men's, youths', and boys' suits, coats, and overcoats. Establishments primarily engaged in manufacturing uniforms (except athletic) are also included in this industry. Establishments engaged in manufacturing work clothing are classified in industry 2328. For a detailed list of products of industry 2311, refer to table 6A, product codes 23111 — to 23114 —.

Value of shipments and other receipts of the Men's and Boys' Suits and Coats Industry in 1972 totaled \$2,396.8 million. This included shipments of men's and boys' suits and coats (primary products) valued at \$2,144.8 million, shipments of other products (secondary products) valued at \$143.2 million, and miscellaneous receipts (mainly resales) of \$108.8 million.

Shipments of men's and boys' suits and coats (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 94 percent. Secondary products shipped by this industry in 1972 consisted mainly of men's and boys' separate trousers (\$77.2 million) and men's and boys' clothing, n.e.c., (\$21.2 million).

Shipments of men's and boys' suits and coats (primary products) from establishments classified in industry 2311 in 1972 represented 96 percent (coverage ratio) of these products valued at \$2,230.8 million shipped by all industries. In 1967, the coverage ratio was 97 percent. Other industries shipping men's and boys' suits and coats consisted mainly of industry 2329, Men's and Boys' Clothing, N.E.C., (\$32.4 million) and industry 2327, Men's and Boys' Separate Trousers, (\$17.6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail

portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2311, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2321.—MEN'S AND BOYS' SHIRTS AND NIGHTWEAR (Short Title)

This industry comprises establishments primarily engaged in the manufacture of men's and boys' shirts (including polo and sports shirts) and nightwear cut and sewed from purchased woven or knit fabric. Establishments primarily engaged in manufacturing work shirts are classified in industry 2328. For a detailed list of products of industry 2321, refer to table 6A, product codes 23212 00 to 23215 00.

Value of shipments and other receipts of the Men's and Boys' Shirts and Nightwear Industry in 1972 totaled \$2,130.8 million. This included shipments of men's and boys' shirts (except work shirts) and nightwear (primary products) valued at \$1,849.0 million, shipments of other products (secondary products) valued at \$205.2 million, and miscellaneous receipts (mainly resales) of \$76.6 million.

Shipments of men's and boys' shirts and nightwear (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 80 percent. Secondary products shipped by this industry in 1972 consisted mainly of women's and children's underwear (\$49.0 million) and men's and boys' clothing, n.e.c., (\$41.8 million).

Men's and boys' knit outerwear shirts made in knitting mills are classified as primary products of industry 2253, Knit Outerwear Mills; men's and boys' knit nightwear made in knitting mills is included in industry 2254, Knit Underwear Mills. The production of men's and boys' knit shirts and nightwear cut and sewed from purchased knit fabric is, however, included in industry 2321. In order to show the total value of men's and boys' knit outerwear shirts and knit underwear made by all industries (regardless of the method of production), combined values for the products of industries 2253, 2254, and 2321 are given in table 5B, 5C, and 6A. Using the combined figure of \$2,210.5 million of men's and boys' shirts and nightwear (knit and woven) made by all industries as the base, industry 2321 production of men's and boys' shirts and nightwear in 1972 accounted for 83 percent of the total dollar value of these products. In 1967, the coverage ratio on this basis was 82 percent.

If, however, only the production of men's and boys' shirts and nightwear cut and sewed from purchased woven or knit fabric is considered, industry 2321 production in 1972 repre-

sented 95 percent of the total production of men's and boys' shirts and nightwear cut and sewed from purchased fabrics, valued at \$1,953.5 million. Viewed in this way, there is a high degree of comparability between the industry statistics (tables 1 to 4) and the total value of the products of industry 2321, shown in table 6A.

Other industries shipping men's and boys' shirts (except work shirts) and nightwear consisted mainly of industry 2329, Men's and Boys' Clothing, N.E.C., (\$18.3 million); and industry 2328, Men's and Boys' Work Clothing, (\$31.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2321, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2322.—MEN'S AND BOYS' UNDERWEAR (Short Title)

This industry comprises establishments primarily engaged in the manufacture of men's and boys' underwear cut and sewed from purchased woven or knit fabric. Establishments primarily engaged in knitting underwear are classified in industry 2254 (Knit Underwear Mills).

Value of shipments and other receipts of the Men's and Boys' Underwear Industry in 1972 totaled \$239.4 million. This included shipments of men's and boys' underwear (primary products) valued at \$200.8 million, shipments of other products (secondary products) valued at \$11.5 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$27.5 million.

Shipments of men's and boys' underwear (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 94 percent. Secondary products shipped by this industry in 1972 consisted mainly of men's and boys' shirts and nightwear (\$7.6 million).

Men's and boys' knit underwear garments made in knitting mills are classified as primary products of industry 2254, Knit Underwear Mills, while men's and boys' knit underwear cut and sewed from purchased knit fabric is included in industry 2322. In order to show the total value of men's and boys' knit underwear made by all industries (regardless of the method of production), combined values for the products of industries 2254 and 2322 are given in tables 5B, 5C, and 6A. Using the combined figure of \$582.8 million of men's and boys' under-

wear (knit and woven) made by all industries as the base, industry 2322 production of men's and boys' underwear in 1972 accounted for 34 percent of the total dollar value of these products. In 1967, the coverage ratio was 37 percent.

If, however, only the production of men's and boys' underwear cut and sewed from purchased woven and knit fabric is considered, industry 2322 production in 1972 represented 86 percent of the total production of men's and boys' underwear cut and sewed from purchased fabrics, valued at \$200.8 million. Viewed in this way, there is a high degree of comparability between the industry statistics (tables 1 to 4) and the total value of the products of industry 2322 shown in table 6A.

Other industries shipping men's and boys' underwear consisted mainly of industry 2321, Men's and Boys' Shirts and Nightwear, (\$17.1 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2322, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2323.—MEN'S AND BOYS' NECKWEAR (Short Title)

This industry comprises establishments primarily engaged in the manufacture of men's and boys' neckties, scarfs, and mufflers cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in the manufacture of neckties, scarfs, and mufflers are classified in industry 2253 (Knit Outerwear Mills). For a detailed list of products of industry 2323, refer to table 6A, product codes 23230 21 to 23230 49.

Value of shipments and other receipts of the Men's and Boys' Neckwear Industry in 1972 totaled \$294.9 million. This included shipments of men's and boys' neckwear (primary products) valued at \$262.7 million, shipments of other products (secondary products) valued at \$4.7 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$31.1 million.

Shipments of men's and boys' neckwear (primary products) in 1972 represented 99 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 98 percent.

Shipments of men's and boys' neckwear (primary products) from establishments classified in industry 2323 in 1972 represented 94 percent (coverage ratio) of these products valued at \$279.3 million shipped by all industries. In 1967, the coverage

ratio was 96 percent. Other industries shipping men's and boys' neckwear consisted mainly of industry 2321, Men's and Boys' Shirts and Nightwear, (\$14.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2323, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2327.—MEN'S AND BOYS' SEPARATE TROUSERS (Short Title)

This industry comprises establishments primarily engaged in the manufacture of men's and boys' separate trousers and slacks. Establishments primarily engaged in manufacturing jean-cut casuals and work pants are classified in industry 2328.

Value of shipments and other receipts of the Men's and Boys' Separate Trousers Industry in 1972 totaled \$1,745.0 million. This included shipments of men's and boys' separate trousers (primary products) valued at \$1,513.6 million, shipments of other products (secondary products) valued at \$208.2 million, and miscellaneous receipts (mainly resales) of \$23.2 million.

Shipments of men's and boys' separate trousers (primary products) in 1972 represented 87 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 89 percent. Secondary products shipped by this industry in 1972 consisted mainly of men's and boys' work clothing (\$97.9 million).

Shipments of men's and boys' separate trousers (primary products) from establishments classified in industry 2327 in 1972 represented 85 percent (coverage ratio) of these products valued at \$1,775.9 million shipped by all industries. In 1967, the coverage ratio was 82 percent. Other industries shipping men's and boys' separate trousers consisted mainly of industry 2328, Men's and Boys' Work Clothing, (\$83.4 million) and industry 2311, Men's and Boys' Suits and Coats, (\$77.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2327, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2328.—MEN'S AND BOYS' WORK CLOTHING (Short Title)

This industry comprises establishments primarily engaged in the manufacture of men's and boys' work shirts, pants, and other work clothing and washable service apparel. For a detailed list of products of industry 2328, refer to table 6A, product codes 23281 00 to 23282 20.

Value of shipments and other receipts of the Men's and Boys' Work Clothing Industry in 1972 totaled \$1,738.0 million. This included shipments of men's and boys' work clothing (primary products) valued at \$1,438.2 million, shipments of other products (secondary products) valued at \$253.5 million, and miscellaneous receipts (mainly resales) of \$46.3 million.

Shipments of men's and boys' work clothing (primary products) in 1972 represented 85 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 84 percent. Secondary products shipped by this industry in 1972 consisted mainly of men's and boys' separate trousers (\$83.4 million) and women's and misses' outerwear, n.e.c., (\$50.7 million).

Shipments of men's and boys' work clothing (primary products) from establishments classified in industry 2328 in 1972 represented 89 percent (coverage ratio) of these products valued at \$1,624.8 million shipped by all industries. In 1967, the coverage ratio was 90 percent. Other industries shipping men's and boys' work clothing consisted mainly of industry 2327, Men's and Boys' Separate Trousers, (\$97.9 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2328, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2329.—MEN'S AND BOYS' CLOTHING, N.E.C. (Short Title)

This industry comprises establishments primarily engaged in manufacturing men's, youths', and boys' clothing, not elsewhere classified. Establishments primarily engaged in manufacturing polo and sport shirts from purchased woven or knit materials are classified in industry 2321, separate trousers in industry 2327, work clothing in industry 2328, and leather and sheep lined garments in industry 2386 (Leather and Sheep Lined Clothing). Knitting mills primarily engaged in manufacturing outerwear are classified in industry 2253 (Knit Outer-

wear Mills). For a detailed list of products of industry 2329, refer to table 6A, product codes 23291 00 to 23292 60.

Value of shipments and other receipts of the Men's and Boys' Clothing, N.E.C., Industry in 1972 totaled \$783.2 million. This included shipments of men's and boys' clothing, n.e.c., (primary products) valued at \$589.0 million, shipments of other products (secondary products) valued at \$156.9 million, and miscellaneous receipts (mainly resales) of \$37.3 million.

Shipments of men's and boys' clothing, n.e.c., (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 80 percent. Secondary products shipped by this industry in 1972 consisted mainly of men's and boys' suits and coats (\$32.4 million), men's and boys' separate trousers (\$17.9 million), and men's and boys' shirts and nightwear (\$18.3 million).

Shipments of men's and boys' clothing, n.e.c., (primary products) from establishments classified in industry 2329 for 1972 represented 61 percent (coverage ratio) of these products valued at \$962.6 million shipped by all industries. In 1967, the coverage ratio was also 61 percent.

Other industries shipping men's and boys' clothing, n.e.c., consisted mainly of industry 2328, Men's and Boys' Work Clothing, (\$30.6 million); SIC group 225, Knitting Mills, (\$218.5 million); and industry 2321, Men's and Boys' Shirts and Nightwear, (\$41.8 million).

Men's and boys' knit sweaters and other knit outerwear, n.e.c., made in knitting mills are classified as primary products of industry 2253, Knit Outerwear Mills, while men's and boys' knit outerwear, n.e.c., cut and sewed from purchased knit

fabric are included in industry 2329. In order to show the total value of men's and boys' outerwear, n.e.c., made by all industries (regardless of the method of production), combined values for the products of industries 2253 and 2329 are shown in tables 5B, 5C, and 6A. Using the combined figure of \$962.6 million of men's and boys' outerwear, n.e.c., (knit and woven) made by all industries as a base, industry 2329 production of men's and boys' outerwear, n.e.c., in 1972 accounted for 61 percent of the total dollar value of these products. The 1967 coverage ratio was also 61 percent.

If, however, only the production of men's and boys' knit sweaters and other knit outerwear, n.e.c., cut and sewed from purchased woven and knit fabric is considered, industry 2329 production in 1972 represented 77 percent of the total production of men's and boys' knit sweaters and other knit outerwear, n.e.c., cut and sewed from purchased fabric, valued at \$589.0 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2329, these establishments accounted for 1 percent of value of shipments.

SIC COMPARABILITY

The code numbers and definitions of the industries included in this publication were unchanged between 1972 and 1967.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2311 | Industry 2321 | Industry 2322 | Industry 2323 | Industry 2327 | Industry 2328 | Industry 2329 |
|-----------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| 1972..... | 721 | 516 | 67 | 291 | 463 | 297 | 481 |
| 1967..... | 904 | 570 | 71 | 296 | 579 | 277 | 517 |
| 1963..... | 1,031 | 659 | 65 | 341 | 667 | 301 | 529 |

(NA) Not available. (S) Withheld because the data did not meet publication standards. (Z) Less than half of the unit of measurement shown. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above.
(Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|--|----------------------------|-------------------|------------------------------|--------------------|-------------------------|----------------------------|---|--|---|--|

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization:
1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|---|----------------------------|-------------------|------------------------------|--------------------|-------------------------|----------------------------|---|--|---|--|

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization:
1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

(D) Withheld to avoid disclosing figures for individual companies.

(Z) Less than half of the unit of measurement shown.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|-----------|---|--------------------|-------------------|--------------------|------------------------|--------------------------------------|------------------------------------|-----------------------|--------------------------|-------------------------------|
| | | Total | Primary products | Secondary products | Miscellaneous receipts | Primary product specialization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio |
| | | (million dollars) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. B & C (percent) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. F (percent) |

¹Includes products of knitting mills (SIC group 225) which are primary to industries 2253, 2254, and 2259. See text for more detailed discussion.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | Other industries | Product code | Industry, class of products, and miscellaneous receipts | Other industries |
|--------------|--|------------------|--------------|---|------------------|
| | Listing of the other industries with over \$2 million shipments of the primary product | | | Listing of the other industries with over \$2 million shipments of the primary product--Continued | |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not Available. ^eFrom 10 to 30 percent of this figure was estimated.

¹The data for 1972 and 1967 present totals as collected in the census of manufactures as well as comparable totals from Current Industrial Reports series. The product detail as shown are those collected on the CIR form specified.

²Quantity data as shown for the census represents shipments, whereas the figures shown for annual form MA-23A represent production.

³Excludes tailored coats and jackets made on State or Federal Government contract.

⁴For 1967, data for this item were not collected separately. The information is shown below in product code 23219 11.

⁵An unknown amount of swimwear made in knitting mills is included in product code 22533 39 as shown.

⁶For 1972 and 1967, data for men's and boys' sweaters, knit jackets, and jerseys are not directly comparable to the information shown on census form MA-23A. The census of manufactures includes knit jackets and jerseys, whereas the MA-23A figures exclude these products.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²Contract receipts data after 1958 include all receipts for work done for others on their materials regardless of the industry classification of the establishment. Data on this basis are not available for years prior to 1963 and, therefore, are not included in the 4-digit totals.

³For purposes of comparability with prior years' annual survey of manufactures data, the value of shipments of the knitting mills (SIC group 225) has been excluded. (See tables 5C and 6A.)

EXPLANATORY TEXT

WOMEN'S AND MISSES' OUTERWEAR

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2331—Women's, Misses', and Juniors' Blouses, Waists, and Shirts*

2335—Women's, Misses', and Juniors' Dresses*

2337—Women's, Misses', and Juniors' Suits, Skirts, and Coats*

2339—Women's, Misses', and Juniors' Outerwear, N.E.C.*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Patterns of Operation.—The apparel industries are characterized by three major types of establishment operation: (1) Regular or inside factories, known as "manufacturers," (2) apparel-"jobbers," and (3) outside or contract factories, the "contractors."

The "manufacturer" purchases fabric, employs production workers in his own plant to cut and sew garments, and sells the finished products; in effect, this establishment type performs all of the usual manufacturing functions within his own establishment.

The apparel "jobber" primarily performs only the entrepreneurial functions of the manufacturing concern, such as buying raw materials, designing and preparing samples, arranging with outside factories (contractors) for the manufacture of his garments from his own materials, and marketing the

finished product. A number of jobbers, however, do maintain the cutting operation within their own establishments; only the final actual processing (cutting, sewing, finishing, etc.) is done on contract in an outside factory.

The apparel "contractor" employs production workers in his own establishment to process materials owned by others, makes products to specification, and does not become involved in the sale of the finished garment.

Methods of Reporting on Census Questionnaires.—Typically, the apparel manufacturer reports figures on employment (including production workers), cost of piece goods and other raw materials, and the value of products made by him from his own materials. The apparel jobber will show, in addition to his cost of raw materials, a cost for contract work and the value of products made for him from his own materials. The typical apparel jobber's questionnaire shows few, if any, production workers, and his labor costs are represented in his "cost of contract work." The contractor, on the other hand, reports figures on employment (primary production workers). Instead of showing the value of the garments which he produced (which would duplicate the data reported by his principals), the contractor reports his receipts for the contract work done for jobbers on their materials. His materials costs and contract receipts do not include any costs for materials which he has processed but did not own.

Classification of Establishments.—Since these different methods of operation lead to significant differences in the various relationships between wages and salaries paid, cost of materials, value of products, and value added by manufacture, plants were classified by their primary method of operation; i.e., "manufacturer," "jobber," or "contractor." Wherever possible, separate statistics for each group are shown in tables 2 to 4.

It should be noted, however, that many establishments in these industries employ more than one method of operating. For example, some establishments act as both manufacturer and jobber, or as manufacturer and contractor. In assigning the primary method of operation for manufacturer-jobber plants, the relationship between wages and salaries paid to the cost of contract work was the determining factor. If wage and salary payments exceeded contract payments, the plant was classified as a "manufacturer;" if the contract payments exceeded the wage and salary payments, the plant was classified as a "jobber." Similarly, for manufacturer-contractor plants, the relationship between the value of products made for their own account was compared with the receipts for work done on materials owned by other establishments to determine the plant's primary method of operation.

*Note that the "short title" for this industry is used throughout the report.

A number of multiplant companies cut and sew apparel in separate plants. In these cases, the sewing plants were treated as "contractors" to the cutting establishments. Such contract plants were requested to report their value of work done as "contract receipts for work done for others;" the cutting establishment reported the value of production of the finished garment and included the cost of the work done by the sewing plant in the "cost of contract work." This procedure somewhat inflates the amount of contract payments and receipts as they are usually described in the trade, where contractors are usually thought of as independently owned establishments.

INDUSTRY 2331.—WOMEN'S AND MISSES' BLOUSES AND WAISTS (Short Title)

This industry comprises establishments primarily engaged in manufacturing women's, misses', and juniors' blouses, waists, and shirts. Knitting mills primarily engaged in manufacturing outerwear are classified in industry 2253, Knit Outerwear Mills. Establishments primarily engaged in manufacturing girls', children's, and infants' blouses, waists, and shirts are classified in industry 2361, Children's Dresses and Blouses. For a detailed list of products of industry 2331, refer to table 6A, product codes 23312 00 to 23317 00.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and the title are also the same.

Value of shipments and other receipts of the Women's and Misses' Blouses and Waists Industry in 1972 totaled \$1,254.9 million. This included shipments of women's, misses', and juniors' blouses, waists, and shirts (primary products) valued at \$1,022.4 million, shipments of other products (secondary products) valued at \$202.8 million, and miscellaneous receipts (mainly resales) of \$29.7 million.

Shipments of women's, misses', and juniors' blouses, waists, and shirts (primary products) in 1972 represented 83 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 84 percent. Secondary products shipped by this industry in 1972 consisted mainly of women's, misses', and juniors' outerwear, n.e.c., (\$83.6 million).

Shipments of women's, misses', and juniors' blouses, waists, and shirts (primary products) from establishments classified in industry 2331 in 1972 represented 74 percent (coverage ratio) of these products valued at \$1,390.3 million shipped by all industries. In 1967, the coverage ratio was 75 percent. Other industries shipping women's, misses', and juniors' blouses, waists, and shirts consisted mainly of industry 2339, Women's and Misses' Outerwear, N.E.C., (\$100.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small

number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2331, these establishments accounted for 10 percent of value of shipments.

INDUSTRY 2335.—WOMEN'S AND MISSES' DRESSES (Short Title)

This industry comprises establishments primarily engaged in manufacturing women's, misses', and juniors' dresses, including ensemble dresses and pants dresses, whether sold by the piece or by the dozen. Establishments primarily engaged in manufacturing girls', children's, and infants' dresses are classified in industry 2361, Children's Dresses and Blouses. For a detailed list of products of industry 2335, refer to table 6A, product codes 23351 00 to 23352 33.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Women's and Misses' Dresses Industry in 1972 totaled \$3,587.2 million. This included shipments of women's, misses', and juniors' dresses (primary products) valued at \$3,388.1 million, shipments of other products (secondary products) valued at \$147.5 million, and miscellaneous receipts (mainly contract and commission receipts) of \$51.6 million.

Shipments of women's, misses', and juniors' dresses (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of women's, misses', and juniors' suits (\$49.7 million).

Shipments of women's, misses', and juniors' dresses (primary products) from establishments classified in industry 2335 in 1972 represented 96 percent (coverage ratio) of these products valued at \$3,536.2 million shipped by all industries. In 1967, the coverage ratio was 95 percent. Other industries shipping women's, misses', and juniors' dresses consisted mainly of industry 2337, Women's and Misses' Suits and Coats, (\$49.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2335, these establishments accounted for 24 percent of value of shipments.

INDUSTRY 2337.—WOMEN'S AND MISSES' SUITS AND COATS (Short Title)

This industry comprises establishments primarily engaged in manufacturing women's, misses', and juniors' suits, pant suits, skirts, and coats except fur coats and raincoats. These garments are generally tailored and usually lined. Establishments primarily engaged in manufacturing fur garments are classified in industry 2371, Fur Goods; raincoats in industry 2385, Waterproof Outergarments; and knitting mills primarily engaged in manufacturing knit outerwear, in industry 2253, Knit Outerwear Mills. For a detailed list of products of industry 2337, refer to table 6A, product codes 23371 00 to 23374 20.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Women's and Misses' Suits and Coats Industry in 1972 totaled \$1,806.4 million. This included shipments of women's, misses', and juniors' suits, skirts, and coats (primary products) valued at \$1,454.3 million, shipments of other products (secondary products) valued at \$278.2 million, and miscellaneous receipts (mainly resales and other miscellaneous receipts) of \$73.9 million.

Shipments of women's, misses', and juniors' suits, skirts, and coats (primary products) in 1972 represented 84 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 86 percent. Secondary products shipped by this industry in 1972 consisted mainly of women's, misses', and juniors' outerwear, n.e.c., (\$121.9 million).

Shipments of women's, misses', and juniors' suits, skirts, and coats (primary products) from establishments classified in industry 2337 in 1972 represented 80 percent (coverage ratio) of these products valued at \$1,822.2 million shipped by all industries. In 1967, the coverage ratio was 90 percent. Other industries shipping women's, misses', and juniors' suits, skirts, and coats consisted mainly of industry 2339, Women's and Misses' Outerwear, N.E.C., (\$79.5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2337, these establishments accounted for 13 percent of value of shipments.

INDUSTRY 2339.—WOMEN'S AND MISSES' OUTERWEAR, N.E.C. (Short Title)

This industry comprises establishments primarily engaged in manufacturing women's, misses', and juniors' outerwear, not elsewhere classified, cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing outerwear are classified in industry 2253, Knit Outerwear Mills. For a detailed list of products of industry 2339, refer to table 6A, product codes 23392 00 to 23393 81.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Women's and Misses' Outerwear, N.E.C., Industry in 1972 totaled \$1,638.0 million. This included shipments of women's, misses', and juniors' outerwear, n.e.c., (primary products) valued at \$1,268.7 million, shipments of other products (secondary products) valued at \$293.6 million, and miscellaneous receipts (mainly resales and other miscellaneous receipts) of \$75.7 million.

Shipments of women's, misses', and juniors' outerwear, n.e.c., (primary products) in 1972 represented 81 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 77 percent. Secondary products shipped by this industry in 1972 consisted mainly of women's, misses', and juniors' woven-fabric waists and shirts (\$69.5 million) and women's, misses', and juniors' skirts and jackets (\$55.7 million).

Shipments of women's, misses', and juniors' outerwear, n.e.c., (primary products) from establishments classified in industry 2339 in 1972 represented 62 percent (coverage ratio) of these products valued at \$2,054.3 million shipped by all industries. In 1967, the coverage ratio was 59 percent. Other industries shipping women's, misses', and juniors' outerwear, n.e.c., consisted mainly of industry 2337, Women's and Misses' Suits and Coats, (\$127.1 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2339, these establishments accounted for 9 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|--|----------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | | | | |
| | (number) | (number) | (1,000) | (million dollars) | (1,000) | (millions) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (percent) | (percent) |

TABLE 1A. General Statistics: 1958 to 1972—Continued

Footnotes for table 1A

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2331 | Industry 2335 | Industry 2337 | Industry 2339 |
|-----------|------------------|------------------|------------------|------------------|
| 1972..... | 890 | 5,295 | 1,548 | 1,247 |
| 1967..... | 921 | 5,008 | 2,058 | 1,048 |
| 1963..... | 1,130 | 4,577 | 2,481 | 1,252 |

(NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²Some of the small establishments in this industry may have been misclassified as to industry. This does not significantly affect the statistics other than the number of establishments.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

(See appendix, Explanation of Terms)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|--|----------------------------|-------------------|------------------------------|--------------------|-------------------------|----------------------------|---|--|---|--|

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization:
1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

- Represents zero.

(D) Withheld to avoid disclosing figures for individual companies.

(Z) Less than half of the unit of measurement shown.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|--------------|---|----------------------|----------------------|-----------------------|---------------------------|--|-------------------------------------|-----------------------------|--------------------------------|-------------------------------|

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 5A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Women's and misses' blouses and waists (SIC 2331) | Women's and misses' dresses (SIC 2335) | Women's and misses' suits and coats (SIC 2337) | Women's and misses' outerwear, n.e.c. TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Women's and misses' blouses and waists (SIC 2331) | Women's and misses' dresses (SIC 2335) | Women's and misses' suits and coats (SIC 2337) | Women's and misses' outerwear, n.e.c. (SIC 2339) | Knitting mills (SIC 225) | Other industries |

| | Washable service apparel..... | ...do..... | 2,321 | 117.0 | 2,115 | 88.8 |
| 23392 13 | Uniform..... | ...do..... | 2,087 | 108.9 | 1,853 | 81.9 |
| 23392 15 | Chiefly cotton..... | ...do..... | 365 | (X) | (NA) | (NA) |
| 23392 16 | Fabric, except chiefly cotton..... | ...do..... | 1,605 | (X) | | |
| | Fabric, n.s.k..... | ...do..... | 117 | (X) | | |
| 23392 17 | Other washable service apparel, including medical and lab jackets and smocks..... | ...do..... | 234 | 8.1 | 262 | 6.9 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. ^eFrom 10 to 30 percent of this figure was estimated.

¹Includes receipts for contract work.

²A review of reports submitted on both the census of manufactures and Census Annual form MA-23A indicates a significant number of misclassification problems for blouses and knit outerwear sport shirts. These data cells will be corrected, if possible, and shown in the annual report for 1973.

³The quantity data reported on Census Annual form MA-23A, Apparel, represent cuttings rather than shipments.

⁴A significant number of firms classified in industry 2335, Women's and Misses' Dresses, provided no detailed information on their type of activity (manufacturer, jobber, or contractor), dollar value of their shipments of dresses, or receipts for work done on dresses from materials owned by others. The figure given is an estimate based on their payroll against which industry averages were applied.

⁵Contract receipts are not included in the total shown for women's, misses', and juniors' dresses. Contract receipts included all receipts for work on women's, misses', and juniors' dresses done for others on their materials regardless of the industry classification of the establishment.

⁶Quantity figures as shown for the census represent shipments, whereas the figures shown for Census Annual form MA-23A, Apparel, represent production.

⁷Separate data are not requested in the census of manufactures for skirts made in knitting mills.

⁸Quantity estimates based on the unit-value relationship reported for other products in the product class.

⁹Excludes cutting of aprons.

¹⁰Represents shipments of bathing suits made of woven fabric only. Separate data for knit were not collected.

¹¹For 1967, swimwear made of knit fabric was reported with all other outerwear.

¹²Includes dungarees made in knitting mills.

¹³Includes swimwear made of knit fabric.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| | | | Hawaii..... | 1.9 | (NA) |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

- Represents zero. (X) Not applicable. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

EXPLANATORY TEXT

WOMEN'S AND CHILDREN'S UNDERWEAR; HEADWEAR; CHILDREN'S OUTERWEAR

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2341—Women's, Misses', Children's, and Infants' Underwear and Nightwear*
- 2342—Brassieres, Girdles, and Allied Garments*
- 2351—Millinery
- 2352—Hats and Caps, Except Millinery
- 2361—Girls', Children's, and Infants' Dresses, Blouses, Waists, and Shirts*
- 2363—Girls', Children's, and Infants' Coats and Suits*
- 2369—Girls', Children's, and Infants' Outerwear, N.E.C.*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Patterns of Operation.—The apparel industries are characterized by three major types of establishment operations: (1) Regular or inside factories, known as "manufacturers," (2) apparel "jobbers," and (3) outside or contract factories, the "contractors."

The "manufacturer" purchases fabric, employs production workers in his own plant to cut and sew garments, and sells the finished products; in effect, this establishment type performs

all of the usual manufacturing functions within his own establishment.

The apparel "jobber" primarily performs only the entrepreneurial functions of the manufacturing concern, such as buying raw materials, designing and preparing samples, arranging with outside factories (contractors) for the manufacture of his garments from his own materials, and marketing the finished product. A number of jobbers, however, do maintain the cutting operation within their own establishments; only the final actual processing (cutting, sewing, finishing, etc.) is done on contract in an outside factory.

The apparel "contractor" employs production workers in his own establishment to process materials owned by others, makes products to specification, and does not become involved in the sale of the finished garment.

Methods of Reporting on Census Questionnaires.—Typically, the apparel manufacturer reports figures on employment (including production workers), cost of piece goods and other raw materials, and the value of products made by him from his own materials. The apparel jobber will show, in addition to his cost of raw materials, a cost for contract work and the value of products made for him from his own materials. The typical apparel jobber's questionnaire shows few, if any, production workers, and his labor costs are represented in his "cost of contract work." The contractor, on the other hand, reports figures on employment (primary production workers). Instead of showing the value of the garments which he produced (which would duplicate the data reported by his principals), the contractor reports his receipts for the contract work done for jobbers on their materials. His materials costs and contract receipts do not include any costs for materials which he has processed but did not own.

Classification of Establishments.—Since these different methods of operation lead to significant differences in the various relationships between wages and salaries paid, cost of materials, value of products, and value added by manufacture, plants were classified by their primary method of operation; i.e., "manufacturer," "jobber," or "contractor." Wherever possible, separate statistics for each group are shown in tables 2 to 4.

It should be noted, however, that many establishments in these industries employ more than one method of operating. For example, some establishments act as both manufacturer and jobber, or as manufacturer and contractor. In assigning the primary method of operation for manufacturer-jobber plants, the relationship between wages and salaries paid to the cost of

*Note that the "short title" for this industry is used throughout the report.

contract work was the determining factor. If wage and salary payments exceeded contract payments, the plant was classified as a "manufacturer"; if the contract payments exceeded the wage and salary payments, the plant was classified as a "jobber." Similarly, for manufacturer-contractor plants, the relationship between the value of products made for their own account was compared with the receipts for work done on materials owned by other establishments to determine the plant's primary method of operation.

A number of multiplant companies cut and sew apparel in separate plants. In these cases, the sewing plants were treated as "contractors" to the cutting establishments. Such contract plants were requested to report their value of work done as "contract receipts for work done for others"; the cutting establishment reported the value of production of the finished garment and included the cost of the work done by the sewing plant in the "cost of contract work." This procedure somewhat inflates the amount of contract payments and receipts as they are usually described in the trade, where contractors are usually thought of as independently owned establishments.

INDUSTRY 2341.—WOMEN'S AND CHILDREN'S UNDERWEAR (Short Title)

This industry comprises establishments primarily engaged in manufacturing women's, misses', children's, and infants' underwear and nightwear cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing underwear and nightwear are classified in industry 2254, Knit Underwear Mills. For a detailed list of products of industry 2341, refer to table 6A, product codes 23412 00 to 23413 31.

Value of shipments and other receipts of the Women's and Children's Underwear Industry in 1972 totaled \$1,335.5 million. This included shipments of women's and children's underwear (primary products) valued at \$1,239.7 million, shipments of other products (secondary products) valued at \$79.4 million, and miscellaneous receipts of \$16.4 million).

Shipments of women's and children's underwear (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 94 percent. Secondary products shipped by this industry in 1972 consisted mainly of children's outerwear, n.e.c., (\$14.6 million) and men's and boys' underwear (\$8.2 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 29.1 percent of the total industry shipments are represented by plants specializing in

product class 23412, Women's and children's underwear made from woven or purchased knit fabrics; and 49.8 percent in product class 23413, Women's and children's nightwear made from woven or purchased knit fabrics.

Women's and children's knit underwear and nightwear made in knitting mills are classified as primary products of industry 2254, Knit Underwear Mills, while the production of women's and children's knit underwear cut and sewed from purchased knit fabric is included in industry 2341. In order to show the total value of women's and children's underwear made by all industries (regardless of the method of production), combined values for the products of industries 2254 and 2341 are given in tables 5 and 6. Using the combined figure of \$1,407.6 million of women's and children's underwear and nightwear as the base, industry 2341 production of women's and children's underwear and nightwear in 1972 accounted for 88 percent of the total dollar value of these products. In 1967, the coverage ratio was 86 percent. Other industries shipping women's and children's underwear consisted mainly of industry 2321, Men's and Boys' Shirts and Nightwear, (\$4.9 million); and industry 2342, Brassieres and Allied Garments, (\$15.6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2341, these establishments accounted for 10 percent of value of shipments.

INDUSTRY 2342.—BRASSIERES AND ALLIED GARMENTS (Short Title)

This industry comprises establishments primarily engaged in manufacturing brassieres, girdles, corsets, corset accessories, and allied garments. Establishments primarily engaged in manufacturing surgical and orthopedic appliances are classified in industry 3842, Surgical Appliances and Supplies. For a detailed list of products of industry 2342, refer to table 6A, product codes 23421 10 to 23422 81.

Value of shipments and other receipts of the Brassieres and Allied Garments Industry in 1972 totaled \$647.0 million. This included shipments of brassieres and allied garments (primary products) valued at \$609.5 million, shipments of other products (secondary products) valued at \$27.7 million, and miscellaneous receipts of \$9.8 million.

Shipments of brassieres and allied garments (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total product shipments (primary and

secondary). The industry specialization ratio in 1967 was 95 percent. Secondary products shipped by this industry in 1972 consisted mainly of women's and children's underwear and nightwear (\$15.6 million) and apparel and accessories, n.e.c., (\$6.8 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 62.5 percent of the total industry shipments are represented by plants specializing in product class 23421, Brassieres, and 28.7 percent in 23422, Corsets, girdles, combinations, and accessories.

Shipments of brassieres and allied garments (primary products) from establishments classified in industry 2342 in 1972 represented 90 percent (coverage ratio) of these products valued at \$679.5 million shipped by all industries. In 1967, the coverage ratio was 97 percent. Other industries shipping brassieres and allied garments consisted mainly of industry 3069, Fabricated Rubber Products, N.E.C., (\$20 to \$50 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2342, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2351.—MILLINERY

This industry comprises establishments primarily engaged in manufacturing women's, misses', children's, and infants' millinery. Establishments primarily engaged in manufacturing millinery braid and trimmings are classified in industry 2396, Automotive and Apparel Trimmings. For a detailed list of products of industry 2351, refer to table 6A, product codes 23510 11 to 23510 89.

Value of shipments and other receipts of the Millinery Industry in 1972 totaled \$58.1 million. This included shipments of millinery (primary products) valued at \$56.6 million, shipments of other products (secondary products) valued at \$.2 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$1.3 million.

Shipments of millinery (primary products) in 1972 represented 99 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 99 percent.

Shipments of millinery (primary products) from establishments classified in industry 2351 in 1972 represented 96

percent (coverage ratio) of these products valued at \$58.7 million shipped by all industries. In 1967, the coverage ratio was 98 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2351, these establishments accounted for 36 percent of value of shipments.

INDUSTRY 2352.—HATS AND CAPS, EXCEPT MILLINERY

This industry comprises establishments primarily engaged in manufacturing hats and caps (except millinery) and all hat bodies. Knitting mills primarily engaged in manufacturing caps are classified in industry 2253, Knit Outerwear Mills. For a detailed list of products of industry 2352, refer to table 6A, product codes 23521 15 to 23522 98.

Value of shipments and other receipts of the Hats and Caps, Except Millinery, Industry in 1972 totaled \$171.0 million. This included shipments of hats and caps, except millinery, (primary products) valued at \$145.8 million, shipments of other products (secondary products) valued at \$5.9 million, and miscellaneous receipts of \$19.3 million.

Shipments of hats and caps, except millinery, (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 99 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 32.1 percent of the total industry shipments are represented by plants specializing in product class 23521, Hats and hat bodies (except cloth and millinery), and 52.6 percent in 23522, Cloth hats and caps.

Shipments of hats and caps, except millinery, (primary products) from establishments classified in industry 2352 in 1972 represented 99 percent (coverage ratio) of these products valued at \$147.5 million shipped by all industries. In 1967, the coverage ratio was also 99 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other

Government agencies and the remaining statistics constructed from industry averages. For industry 2352, these establishments accounted for 12 percent of value of shipments.

INDUSTRY 2361.—CHILDREN'S DRESSES AND BLOUSES (Short Title)

This industry comprises establishments primarily engaged in manufacturing girls', children's, and infants' dresses, blouses, waists, and shirts, cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing outerwear are classified in industry 2253, Knit Outerwear Mills. For a detailed list of products of industry 2361, refer to table 6A, product codes 23610 10 to 23612 00.

Value of shipments and other receipts of the Children's Dresses and Blouses Industry in 1972 totaled \$655.2 million. This included shipments of children's dresses and blouses (primary products) valued at \$579.7 million, shipments of other products (secondary products) valued at \$71.4 million, and miscellaneous receipts of \$4.1 million.

Shipments of children's dresses and blouses (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 92 percent. Secondary products shipped by this industry in 1972 consisted mainly of children's outerwear, n.e.c., (\$52.5 million).

Girls' and children's knit outerwear shirts made in knitting mills are classified as primary products of industry 2253, Knit Outerwear Mills, while the production of girls' and children's knit shirts cut and sewed from purchased knit fabric is included in industry 2361. In order to show the total value of girls' and children's knit outerwear shirts made by all industries (regardless of the method of production), combined values for the products of industries 2253 and 2361 are given in tables 5 and 6. Using the combined figure of \$673.0 million of girls' and children's dresses, blouses, and knit shirts as the base, industry 2361 production of girls' and children's dresses, blouses, and knit shirts in 1972 accounted for 86 percent of the total dollar value of these products. In 1967, the coverage ratio was 82 percent. Other industries shipping children's dresses and blouses (primary products) consisted mainly of industry 2369, Children's Outerwear, N.E.C., (\$35.3 million) and industry 2331, Women's and Misses' Blouses and Waists, (\$10.6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed

from industry averages. For industry 2361, these establishments accounted for 8 percent of value of shipments.

INDUSTRY 2363.—CHILDREN'S COATS AND SUITS (Short Title)

This industry comprises establishments primarily engaged in manufacturing girls', children's, and infants' coats and suits cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing outerwear are classified in industry 2253, Knit Outerwear Mills.

Value of shipments and other receipts of the Children's Coats and Suits Industry in 1972 totaled \$188.5 million. This included shipments of children's coats and suits (primary products) valued at \$170.5 million, shipments of other products (secondary products) valued at \$17.5 million, and miscellaneous receipts of \$.5 million.

Shipments of children's coats and suits (primary products) in 1972 represented 91 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 93 percent. Secondary products shipped by this industry in 1972 consisted mainly of children's outerwear, n.e.c., (\$3.6 million) and women's and misses' suits and coats (\$3.9 million).

Shipments of children's coats and suits (primary products) from establishments classified in industry 2363 in 1972 represented 85 percent (coverage ratio) of these products valued at \$199.8 million shipped by all industries. In 1967, the coverage ratio was 84 percent. Other industries shipping children's coats and suits consisted mainly of industry 2329, Men's and Boys' Clothing, N.E.C., (\$3.5 million) and industry 2337, Women's and Misses' Suits and Coats, (\$5.9 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2363, these establishments accounted for 14 percent of value of shipments.

INDUSTRY 2369.—CHILDREN'S OUTERWEAR, N.E.C. (Short Title)

This industry comprises establishments primarily engaged in manufacturing girls', children's, and infants' outerwear, not elsewhere classified, cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing outerwear are classified in industry 2253, Knit Outerwear

EXPLANATORY TEXT—Continued

Mills. For a detailed list of products of industry 2369, refer to table 6A, product codes 23690 13 to 23690 90.

Value of shipments and other receipts of the Children's Outerwear, N.E.C., Industry in 1972 totaled \$578.2 million. This included shipments of children's outerwear, n.e.c., (primary products) valued at \$485.7 million, shipments of other products (secondary products) valued at \$84.4 million, and miscellaneous receipts of \$8.1 million.

Shipments of children's outerwear, n.e.c., (primary products) in 1972 represented 85 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 80 percent. Secondary products shipped by this industry in 1972 consisted mainly of children's dresses and blouses (\$35.3 million).

Girls' and children's sweaters and other knit outerwear, n.e.c., made in knitting mills are classified as primary products of industry 2253, Knit Outerwear Mills, while girls' and children's sweaters and knit outerwear, n.e.c., cut and sewed from purchased knit fabric are included in industry 2369. In order to show the total dollar value of girls' and children's outerwear, n.e.c., made by all industries (regardless of the method of production), combined values for the products of industries 2253 and 2369 are shown in tables 5 and 6. Using the combined figure of \$691.3 million of girls' and children's outer-

wear, n.e.c., (knit and woven) made by all industries as the base, industry 2369 shipments of girls' and children's outerwear, n.e.c., in 1972 accounted for 70 percent of the total dollar value of these products. In 1967, the coverage ratio was 68 percent. Other industries shipping children's outerwear, n.e.c., consisted mainly of industry 2328, Men's and Boys' Work Clothing, (\$21.8 million); industry 2339, Women's and Misses' Outerwear, N.E.C., (\$20.8 million); and industry 2361, Children's Dresses and Blouses, (\$52.5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2369, these establishments accounted for 13 percent of value of shipments.

SIC COMPARABILITY

The code numbers and definitions of the industries included in this publication were unchanged between 1972 and 1967.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|--|------------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | | | | |
| | (number) | (number) | (1,000) | (million dollars) | (1,000) | (millions) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (percent) | (percent) |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2341 | Industry 2342 | Industry 2351 | Industry 2352 | Industry 2361 | Industry 2363 | Industry 2369 |
|-----------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| 1972..... | 609 | 220 | 215 | 253 | 439 | 155 | 370 |
| 1967..... | 778 | 254 | 477 | 340 | 575 | 216 | 456 |
| 1963..... | 978 | 296 | 710 | 413 | 627 | 269 | 602 |

(NA) Not available. (S) Withheld because the data did not meet publication standards. (Z) Less than half of the unit of measurement shown.

*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²Some of the small establishments in this industry may have been misclassified as to industry. This does not significantly affect the statistics other than the number of establishments or number of companies. (See paragraph in introduction, "Industry Classification of Establishments," for further explanation.)

³Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

⁴Data for 1966 and prior years are not completely comparable to the 1967 and 1972 data because an undetermined amount of Puerto Rican shipments are included in the data for 1966 and prior years. These shipment figures have been excluded from the 1967 and 1972 Census of Manufactures information.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

- Represents zero.

(NA) Not available.

(D) Withheld to avoid disclosing figures for individual companies.

(Z) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

| ESTABS. COVERED BY ADMIN. RECORD ¹ . | 17 | .1 | .4 | .1 | .2 | .4 | .7 | .1 | .7 | (Z) | (Z) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above.
 (Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|--|----------------------------|-------------------|------------------------------|--------------------|-------------------------|----------------------------|---|--|---|--|

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|--------------|---|--------------------|-------------------|--------------------|------------------------|--------------------------------------|------------------------------------|-----------------------|--------------------------|-------------------------------|
| | | Total | Primary products | Secondary products | Miscellaneous receipts | Primary product specialization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio |

¹These figures include the shipments of women's and children's knit underwear and nightwear made in knitting mills (primary products of industry 2254) as well as the shipments of these products cut and sewed from purchased knit cloth. See text for industry 2341 for more detailed discussion.

²These figures include the shipments of children's knit outerwear made in knitting mills (primary products of industry 2253) as well as the shipments of these products cut and sewed from purchased knit cloth. See text for industry 2361 for more detailed discussion.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Footnotes for table 6A)

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review. ^eFrom 10 to 30 percent of this figure was estimated.

¹Quantity figures as shown for the census represent shipments, whereas the figures shown for Annual Form MA-23A, Annual Apparel, represent production.

²Does not include receipts for contract work.

³The total for knit and woven nightwear as reported in the census is not completely comparable to the total reported on Census Annual Form MA-23A due to the inclusion of lounging pajamas in the census total. These garments are not included in the MA-23A total since they are not collected in that survey.

⁴Quantity estimates based on the unit-value relationship reported for other products in the product class.

⁵For 1972, the census of manufactures data exclude those companies reporting as manufacturers in the census of Puerto Rico; however, a number of firms operating as jobbers with production in affiliated Puerto Rican plants are included in the domestic figures. For 1967, the census of manufactures excludes all Puerto Rico shipments, but the data as reported on the MA-23J include 5,398 thousand-dozen brassieres shipped from Puerto Rican plants valued at \$86,203 thousand and 825 thousand-dozen corsets, girdles, and other foundation garments valued at \$21,136 thousand.

⁶On Census Annual Form MA-23J, value of shipments data were collected for corsets, girdles, and foundations, including surgical corsets and garter belts. This was reported for 1972 at \$243.3 million and \$313.3 million for 1967, and appears to be consistent with the value figures collected in the census after adjustments for noncomparable items.

⁷Prices represent manufacturers' wholesale list price.

⁸Establishments primarily engaged in the manufacture of girls', children's, and infants' dresses, blouses, waists, and shirts are classified in industry 2361, and coats and suits in industry 2363.

⁹Includes an unknown amount of play garments made in knitting mills.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |
|--|---|------|--|---|------|
| | 1972 | 1967 | | 1972 | 1967 |
| CHILDREN'S AND INFANTS' KNIT SPORT SHIRTS (PURCHASED KNIT) (23612)--Continued | | | CHILDREN'S AND INFANTS' KNIT SPORT SHIRTS (PURCHASED KNIT) (23612)--Continued | | |
| South Region..... | FF | EE | South Region--Continued | | |
| South Atlantic Division..... | 33.7 | 14.3 | | | |
| North Carolina..... | EE | 8.1 | | | |
| South Carolina..... | BB | AA | East South Central Division..... | CC | 1.1 |
| Georgia..... | BB | BB | Kentucky..... | BB | (NA) |
| Florida..... | 6.0 | (NA) | Alabama..... | AA | (NA) |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9

CC.....\$5.0 to \$9.9

FF.....\$20.0 to \$49.9

BB.....\$2.0 to \$4.9

EE.....\$10.0 to \$19.9

GG.....\$50.0 and over

(NA) Not available.

- Represents zero. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²For purposes of comparability with prior years' annual survey of manufactures data, the value of shipments of the knitting mills (SIC group 225) has been excluded. (See tables 5B and 6A.)

³Data included with product class code 23610, Children's dresses, blouses, and shirts.

EXPLANATORY TEXT

MISCELLANEOUS APPAREL AND ACCESSORIES

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2371—Fur Goods
- 2381—Dress and Work Gloves, Except Knit, and All-Leather*
- 2384—Robes and Dressing Gowns
- 2385—Raincoats and Other Waterproof Outer Garments*
- 2386—Leather and Sheep Lined Clothing
- 2387—Apparel Belts
- 2389—Apparel and Accessories, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2371.—FUR GOODS

This industry comprises establishments primarily engaged in manufacturing furcoats, and other garments, accessories, and trimmings made of fur. Establishments primarily engaged in manufacturing sheep-lined clothing are classified in industry 2386, and those engaged in dyeing and dressing furs in industry 3999.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

*Note that the "short title" for this industry is used throughout the report.

Value of shipments and other receipts of the Fur Goods Industry in 1972 totaled \$220 million. This included shipments of fur goods (primary products), valued at \$212 million, shipments of other products (secondary products) valued at \$1 million, and miscellaneous receipts (mainly commission receipts) of \$7 million.

Shipments of fur goods (primary products) in 1972 represented 99 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 99 percent.

Shipments of fur goods (primary products) from establishments classified in industry 2371 in 1972 represented 99 percent (coverage ratio) of these products valued at \$214 million shipped by all industries. In 1967, the coverage ratio was 100 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2371, these establishments accounted for 33 percent of value of shipments.

INDUSTRY 2381.—FABRIC DRESS AND WORK GLOVES (Short Title)

This industry comprises establishments primarily engaged in manufacturing dress, semidress, and work gloves and mittens, cut and sewn from purchased woven or knit fabric, or these materials combined with leather. Establishments primarily engaged in manufacturing gloves and mittens are classified in industry 2259, establishments primarily engaged in manufacturing leather gloves in industry 3151, those manufacturing rubber gloves in industry 3069, and plastic gloves in industry 3079. For a detailed list of products of industry 2381, refer to table 6A, product codes 23811 30 to 23812 15.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Fabric Dress and Work Glove Industry in 1972 totaled \$199 million. This included shipments of fabric dress and work gloves (primary products), valued at \$164 million, shipments of other products (secondary products) valued at \$12 million, and miscellaneous receipts of \$22 million.

EXPLANATORY TEXT—Continued

Shipments of fabric dress and work gloves (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 91 percent. Secondary products shipped by this industry in 1972 consisted mainly of leather gloves and mittens valued at \$11 million.

Shipments of fabric dress and work gloves (primary products) from establishments classified in industry 2381 in 1972 represented 86 percent (coverage ratio) of these products valued at \$190 million shipped by all industries. In 1967, the coverage ratio was 87 percent. Other industries shipping fabric dress and work gloves consisted mainly of industry 2259, Knitting Mills, N.E.C., at \$19 million, and industry 3151, Leather Gloves and Mittens, at \$5 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2381, these establishments accounted for 7 percent of value of shipments.

INDUSTRY 2384.—ROBES AND DRESSING GOWNS

This industry comprises establishments primarily engaged in manufacturing men's and women's robes and dressing gowns. (Establishments primarily engaged in manufacturing children's robes are classified in industry 2369, Children's Outerwear, N.E.C.). For a detailed list of products of industry 2384, refer to table 6A, product codes 23840 11 to 23840 61.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Robes and Dressing Gowns Industry in 1972 totaled \$203 million. This included shipments of robes and dressing gowns (primary products), valued at \$164 million, shipments of other products (secondary products) valued at \$13 million, and miscellaneous receipts (mainly commission receipts) of \$26 million.

Shipments of robes and dressing gowns (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 96 percent. Secondary products shipped by this industry in 1972 consisted mainly of women's and children's underwear and nightwear at \$5 million to \$10 million.

Shipments of robes and dressing gowns (primary products) from establishments classified in industry 2384 in 1972 represented 97 percent (coverage ratio) of these products valued at

\$170 million shipped by all industries. In 1967, the coverage ratio was 95 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2384, these establishments accounted for 13 percent of value of shipments.

INDUSTRY 2385.—WATERPROOF OUTER GARMENTS (Short Title)

This industry comprises establishments primarily engaged in manufacturing raincoats from purchased rubberized fabrics and other waterproof outer garments made from such material as pliofilm and cellophane. Establishments primarily engaged in manufacturing oiled fabric work garments are classified in industry 2328, and those manufacturing vulcanized rubber garments and garments made from rubberized fabrics produced in the same establishment are classified in industry 3069. For a detailed list of products of industry 2385, refer to table 6A, product codes 23850 10 to 23850 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Waterproof Outer Garments Industry in 1972 totaled \$327 million. This included shipments of waterproof outer garments (primary products), valued at \$304 million, shipments of other products (secondary products) valued at \$9 million, and miscellaneous receipts (mainly commission receipts) of \$14 million.

Shipments of waterproof outer garments (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 95 percent.

Shipments of waterproof outer garments (primary products) from establishments classified in industry 2385 in 1972 represented 94 percent (coverage ratio) of these products valued at \$322 million shipped by all industries. In 1967, the coverage ratio was 93 percent. Other industries shipping waterproof outer garments consisted mainly of industry 2337, Women's and Misses' Suits and Coats, at \$7 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed

EXPLANATORY TEXT—Continued

from industry averages. For industry 2385, these establishments accounted for 24 percent of value of shipments.

INDUSTRY 2386.—LEATHER AND SHEEP LINED CLOTHING

This industry comprises establishments primarily engaged in manufacturing leather and sheep lined garments. Establishments primarily engaged in manufacturing leather gloves and mittens are classified in industry 3151, and fur garments in industry 2371. For a detailed list of products of industry 2386, refer to table 6A, product codes 23860 15 to 23860 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Leather and Sheep Lined Clothing Industry in 1972 totaled \$172 million. This included shipments of leather and sheep lined clothing (primary products), valued at \$151 million, shipments of other products (secondary products) valued at \$10 million, and miscellaneous receipts (mainly commission receipts) of \$11 million.

Shipments of leather and sheep lined clothing (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of women's and misses' coats and suits, industry 2337, at \$5 million.

Shipments of leather and sheep lined clothing (primary products) from establishments classified in industry 2386 in 1972 represented 87 percent (coverage ratio) of these products valued at \$174 million shipped by all industries. In 1967, the coverage ratio was 86 percent. Other industries shipping leather and sheep lined clothing consisted mainly of industry 2329, Men's and Boys' Clothing, N.E.C., at \$16 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2386, these establishments accounted for 10 percent of value of shipments.

INDUSTRY 2387.—APPAREL BELTS

This industry comprises establishments primarily engaged in manufacturing men's and women's apparel belts, regardless of

material. For a detailed list of products of industry 2387, refer to table 6A, product codes 23871 13 to 23872 51.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Apparel Belts Industry in 1972 totaled \$258 million. This included shipments of apparel belts (primary products), valued at \$227 million, shipments of other products (secondary products) valued at \$15 million, and miscellaneous receipts (mainly commission receipts) of \$15 million.

Shipments of apparel belts (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 89 percent. Secondary products shipped by this industry in 1972 consisted mainly of women's handbags and purses, industry 3171, at \$3 million.

Shipments of apparel belts (primary products) from establishments classified in industry 2387 in 1972 represented 97 percent (coverage ratio) of these products valued at \$234 million shipped by all industries. In 1967, the coverage ratio was 98 percent. Other industries shipping apparel belts consisted mainly of industry 3171, Women's Handbags and Purses, at \$5 million to \$10 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2387, these establishments accounted for 9 percent of value of shipments.

INDUSTRY 2389.—APPAREL AND ACCESSORIES, N.E.C.

This industry comprises establishments primarily engaged in manufacturing suspenders, garters, handkerchiefs, and other apparel, not elsewhere classified, such as academic caps and gowns, vestments, and theatrical costumes. For a detailed list of products of industry 2389, refer to table 6A, product codes 23890 31 to 23890 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same. However, the content of the industry has been slightly changed from the previous classification system. Burial garments which were included in industry 3994 in 1967 are now included in this industry.

Value of shipments and other receipts of the Apparel and Accessories, N.E.C., Industry in 1972 totaled \$117 million. This included shipments of apparel and accessories, n.e.c.,

EXPLANATORY TEXT—Continued

(primary products), valued at \$103 million, shipments of other products (secondary products) valued at \$3 million, and miscellaneous receipts (mainly commission receipts) of \$11 million.

Shipments of apparel and accessories, n.e.c., (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 96 percent.

Shipments of apparel and accessories, n.e.c., (primary products) from establishments classified in industry 2389 in 1972 represented 84 percent (coverage ratio) of these products valued at \$123 million shipped by all industries. In 1967, the

coverage ratio was 85 percent. Other industries shipping apparel and accessories, n.e.c., consisted mainly of industry 2342, Brassieres and Allied Garments, at \$7 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2389, these establishments accounted for 16 percent of value of shipments.

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2371 | Industry 2381 | Industry 2384 | Industry 2385 | Industry 2386 | Industry 2387 | Industry 2389 |
|-----------|---------------|---------------|---------------|---------------|---------------|---------------|---------------|
| 1972..... | 796 | 106 | 171 | 236 | 185 | 292 | 238 |
| 1967..... | 1,304 | 140 | 237 | 299 | 135 | 274 | 243 |
| 1963..... | 1,591 | 170 | 268 | 223 | 114 | 288 | 255 |

(NA) Not available. (S) Withheld because the data did not meet publication standards. (Z) Less than half of the unit of measurement shown.

*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |
